

HOW TO MAXIMIZE INVESTMENTS IN EDA TOOLS

Essential to all businesses is to maximize productivity while operating with fewer resources and smaller budgets.

DESIGN A SCALABLE STORAGE MODEL

Construct centrally designed data and tools, provide an easily managed environment to make a consistent product and scale performance by distributing simulation results.

MAXIMIZE ROI ON LICENSING COSTS

Gain visibility into network-based licensing to minimize costs, streamline usage and achieve dramatic increases to productivity.

OPTIMIZE COMPUTING INFRASTRUCTURE

Design the computing infrastructure with the right balance of computing power and capacity to maximize day to day and full chip design work, simulation and verification. Doing this right creates a productive, efficient and cost effective environment.

ENHANCE DESIGNER EXPERIENCE

Optimize the environment to allow designers to focus on design and not infrastructure. Minimize latency while increasing the performance for designers, by creating a model to effectively design locally and remotely.

THE RESULT?

Doing core IT right , such as backups, central authentication and integration with EDA tools, takes dedication but has payoff in the end. Not getting this right will likely cause delays, increase costs and increased time to market.
