

# Data Sync Manager™

Fast, powerful SAP® data copying at your service

Supports and aligns SAP ERP, SRM, CRM, SCM, BW and GTS; compatible with S/4HANA

- Client Sync™ for high performance client copying
- Object Sync™ for reliable test data when you need it
- Data Secure™ to protect your sensitive data
- System Builder™ to build a new system shell quickly

Data Sync Manager (DSM) empowers both technical and functional SAP® users by ensuring access to subsets of production data in non-production systems. This powerful, high-speed solution copies systems, clients and individual business objects, with the option to anonymise the data.

The DSM suite is SAP-certified and consists of four complementary products that can be used on their own, but their real power is experienced when used in combination.

## Client Sync™

Client Sync lets you select a subset of client data to produce a fully functional client with a reduced footprint. With it you can:

- Reduce the data by time period and/or company code.
- Ensure that all dependencies are intact when slicing the data.
- Exclude unnecessary data (e.g. workflows, logs) and easily copy custom tables.

Client Sync uses up to 80% less disk space. It is fast and you can save up to 90% in time because less data is transferred. No post-processing is necessary.

## Object Sync™

Object Sync allows business users to select data at SAP business object level and copy it on demand to a non-production system. You can test and train using valid production data and refresh the data needed.

Object Sync:

- Includes 1000+ business objects from SAP ERP (including HCM), SRM, CRM, SCM, BW and GTS, and is S/4HANA compatible.
- Has templates to be able to reuse settings easily.
- Copies through the SAP application layer (BAPIs) to ensure data integrity.

With Object Sync, business users can transfer data consistently and intelligently without involving technical resources. By providing real test data across SAP releases, it reduces risk during upgrades and the application of Support Packs. Use with Data Secure to ensure your data is masked.

## Data Secure™

Data Secure is the data anonymisation solution that significantly reduces the risk of security breaches in non-production systems. All the most common masking requirements have been pre-defined in rules, but these can be extended to fit your particular purpose. It can handle large volumes of data so it's easy to mask an entire client. This product:

- Complies with all global data protection standards, such as the General Data Protection Regulation (GDPR) and Sarbanes Oxley.
- Works on its own or in conjunction with Client Sync and Object Sync.

## System Builder™

System Builder enables Basis teams to build a new system shell very quickly - the size of the source system does not matter. You can make a complete copy of repository objects and client-independent data in production to create a new non-production system - without a data client - in a very short time.

## Data Sync Manager benefits

- Provides your non-production systems with fresh and accurate test data.
- Refreshes entire clients quickly and reduces post-processing effort (BDLS).
- Provides data when you need it, where you need it.
- Protects sensitive data.

## EPI-USE Labs

EPI-USE Labs provides superior solutions to enhance data management and optimise SAP environments. If you would like more information on how our products make your business more efficient and profitable, please contact us at [info@labs.epiuse.com](mailto:info@labs.epiuse.com) | [www.epiuselabs.com](http://www.epiuselabs.com)

*“EPI-USE Labs’ Data Sync Manager is an integral component of our SAP testing strategy. Having on-demand ERP test data is invaluable, saving us time and resources.”*
