

# Accelerator for Payroll Control Center

The SAP® Payroll of Tomorrow, Today

- Best-practice Payroll processes enable effective work distribution
- Pre-packaged validation rules and KPIs improve efficiency
- Flexible framework accommodates custom validation rules
- Rapid installation and deployment
- Global design with scalable deployment options

# Payroll Control Center

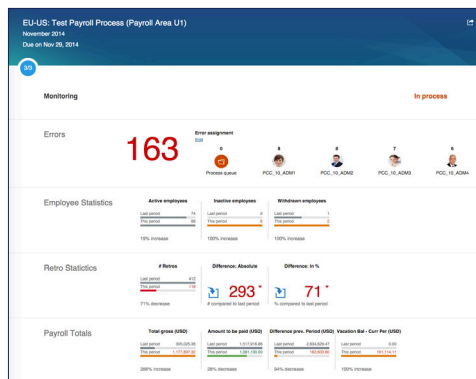

Revolutionize the Payroll process as you know it.

The SAP® Payroll process has traditionally been batch-processing based, time consuming, labor intensive, and prone to errors discovered right at the processing deadline.

With the introduction of the SAP Payroll Control Center (PCC) and the advent of the EPI-USE Accelerator for PCC, the future of Payroll processing is revolutionized.

The PCC is available for On-Premise Payroll and Employee Central Payroll solutions and provides a framework for:

- End-to-end processing of Payroll from a single screen
- Continuous (test-mode) Payroll processing
- Real-time exception monitoring
- Guided update of master data based on warning or error messages
- Automatic rerun of Payroll after corrections
- Integrated analytics
- Optimized administration and task distribution

## EPI-USE Accelerator for PCC

The EPI-USE Accelerator for PCC delivers a scalable solution for single- or multi-country deployments and includes the following components:

- Best practice Payroll processes – ranging from pre-Payroll activities to post-Payroll steps.
- More than 100 pre-built and tested validation rules.
- More than 30 key performance indicators, including number of employees processed, number of retroactive calculations, and more.
- Pre-developed training material to accelerate learning and adoption.
- Table driven set-up for parameters.

## Validation Rules

These validation rules are packaged to help Payroll supervisors and administrators address their specific business needs immediately.

**Payroll Data Correctness** – Pro-active data checks to reduce Payroll errors and streamline processing.

**Payroll Calculations** – Calculation validations to improve the accuracy of Payroll.

**Payroll Completeness** – Process validations to ensure the complete and consistent execution of Payroll, every period.

**Fraud Prevention** – Process and data checks to identify potential fraudulent activities.

**Tax Checks** – Data and calculation validations ranging from identifying missing tax authorities, to mismatches between tax wages and taxes, to tax limits, and more.

**Bank Payments** – Process validations to ensure that payments will be made to employees before files are sent to the bank or checks are printed.

**Company Liability** – Process and data checks to indicate areas where company liabilities may exist.

**System Health** – A pro-active audit that identifies inconsistent configuration, which can significantly impact the accuracy and performance of Payroll.

These validation rules are parameter-driven and can be adjusted (in easily-maintainable tables) according to a client's specific needs.

## About EPI-USE

EPI-USE is a global organization that provides state-of-the-art solutions and services to enhance, streamline and optimize your SAP®, SuccessFactors® and related software environment.
