

2016/17 Volvo XC90

Wheel Bolt Cover Removal

(Manufacturer Supplied Tool Required)

The Volvo XC90 is fitted with wheel bolt covers which require removal before changing the tire.

The tool required to remove these decorative covers can be found in the customer's vehicle in the:

- Glove compartment
- Center console
- Spare tire well at rear of vehicle

Step 1

The glove compartment door is opened via the dash-mounted electronic switch.

Step 2

The spare tire well is located under the load floor in the rear of the XC90.

A foam block is found in the back of the spare tire. The wheel bolt cover removal tool may also be found here with the vehicle's jack and lug wrench.

Step 3

To use the wheel bolt cover removal tool

Slide over wheel bolt cover until tool engages with a click.

Once engaged, pull straight out on the tool and the cover will be pulled from the wheel bolt.

Repeat for each wheel bolt then proceed with tire change.
