RESOURCE SCHEDULING

Built on a revolutionary new architecture, Resource Scheduling is a web-based tool to optimize animal facility staffing and scheduling.

eSirius for Resource Scheduling enables:

EFFICIENT SCHEDULING

- Forecasting allows schedulers to plan ahead using projections on census and staffing fluctuations
- Establish rack-, cage- and species-specific metrics
- Auto-generates electronic daily schedules with alerts for potential problems
- Manage PTO requests/approvals and OT availability/assignments
- Delegate scheduling responsibilities to appropriate staff
- Conduct periodic time and motion studies to recalibrate metrics

GREATER RESPONSIVENESS

- Use the Daily Planner to quickly respond to events such as call-outs and ad-hoc activities
- Develop and execute holiday and emergency plans
- Schedulers can broadcast urgent messages
- All staff members have the ability to report issues

TRANSPARENCY

- Real-time dashboard allows monitoring of ongoing daily progress
- Charting and reports provide views on historical trends and operational efficiencies
