

Exam Integrity and Authentication Streamlined to Make Exam Day More Secure

Protecting the integrity of our assessments is paramount. ExamID is the exam integrity and student authentication software that can help prevent exam-taker impersonation and create a secure and streamlined check-in process. With multiple identification methods used, ExamID can help your institution set up and deliver a secure exam day—regardless of how many students are attending or even if they're in a remote setting.

Detect attempted impersonation, prevent unauthorized access, and provide documented evidence of exam-taker impersonation to faculty and administration.

Deliver remote or large-scale assessments without the cost of manual ID verification and without sacrificing exam integrity.

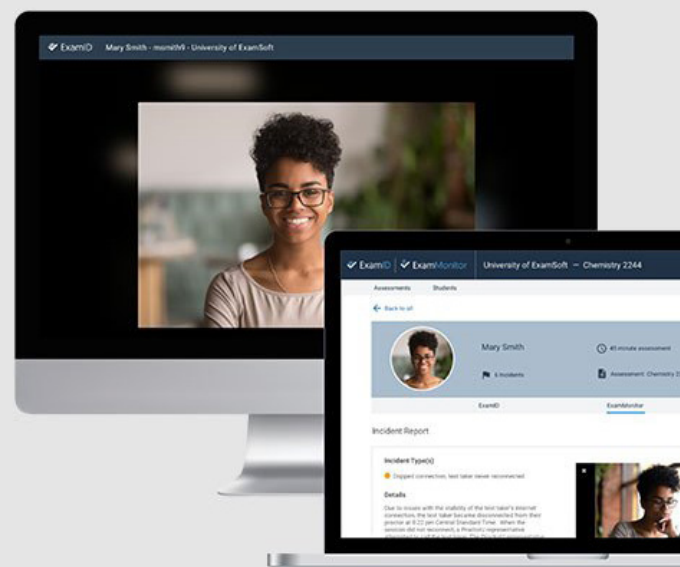

Allow students to complete remote assessments without having to coordinate when a faculty member is available to personally verify their identity.

Two-Step Authentication

ExamID uses a two-step authentication process — username/password and biometric facial recognition — making exam taker impersonation virtually impossible.

Streamline Large Scale Exams

ExamID removes the process of student check-in traditionally required to verify student identification for large-scale exams, while simultaneously removing the possibility for human error

How It Works:

1. Exam takers establish a “baseline” of authentication the first time they log in to their exam software.
2. For each subsequent assessment, exam takers will be verified against their username/password, and biometric facial recognition via their device’s webcam.
3. Validated exam takers will be able to proceed with their assessments.
4. An additional layer of security can be included through ExamMonitor, which provides proctoring services via webcam throughout the assessment.

ExamID + ExamMonitor = End-to-End Remote Exam Security

ExamMonitor is the AI-driven remote proctoring solution that continuously observes exam takers with video and audio monitoring throughout the entire exam, completely eliminating the need for in-person proctoring and providing absolute confidence in the integrity of your exams.

Exam Control

Flag assessments for ID verification

Accountability

Faculty can review failed authentications as needed

Accommodation

Disable ID verification for individual students

Override

Reverse ID verification as needed

ExamSoft is the digital assessment platform that helps institutions achieve higher levels of course, program, and student success. With an intuitive testing application, ExamSoft makes it simple to create, administer, and grade exams and generate detailed performance reports from the results. All to provide educators with a complete and accurate view of student learning.
