

## Streamlining real estate transaction management with iBroker

Dotloop users can connect their account to iBroker, the simplified office management solution for real estate. This integration allows loops to be seamlessly integrated into iBroker's transaction module. Office administrators using both applications will enjoy a streamlined process eliminating the need for double entry. Note - This feature is available to all Brokerage-level dotloop accounts.

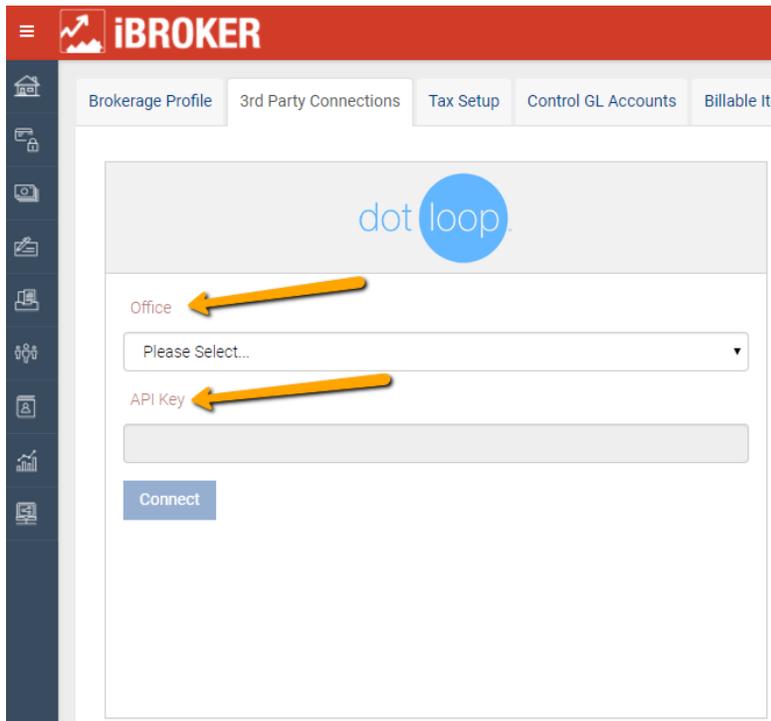

### Connecting to iBroker

Connecting dotloop to iBroker is a quick and easy process. Follow these 4 steps to set up the integration:

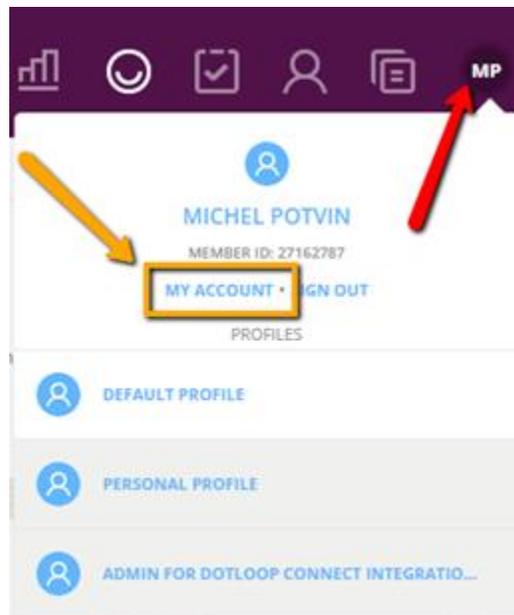

1. From the main menu on the left side of iBroker, go to **Administration > Company**

2. Next, go to the **3<sup>rd</sup> Party Connections** tab and **select an office** in your brokerage. If your brokerage only has one office, it will already be selected for you.

3. Enter the **API Key**. You can obtain the API Key from your dotloop profile. Follow these steps in dotloop to locate it:
  - i. Log in to dotloop and navigate to your account. Move your mouse over your initials in the top right corner and click on **MY ACCOUNT**.

- ii. On the My Account page, click on **PROFILES** under ACCOUNT SETTINGS. On the new page, scroll down to find your API Key. Select the whole API key, right click on it and select Copy.

## My account

Keep your profile, notification preferences and other settings up to date.

YOUR CONTACT INFORMATION WILL BE USED TO AUTO FILL LOOPS AND DOCUMENTS WHEN POSSIBLE.

### PERSONAL INFORMATION

	FIRST NAME	LAST NAME
<a href="#">ADD PHOTO</a>	Michel	Potvin
	USER ROLE	EMAIL ADDRESS
	BROKERAGE MANAGER	mpotvin@gryphtech.com

DAILY TASK REMINDERS

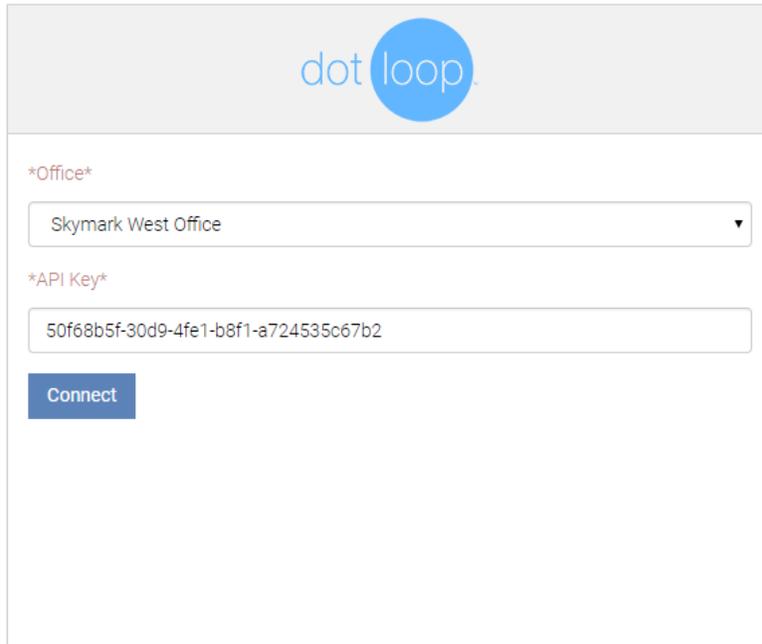

### API

YOUR API KEY IS: 50f68b5f-30d9-4fe1-b8f1-a724535c67b2 [CHANGE KEY](#)  
[LEARN WHAT THE API CAN DO](#)

[DEACTIVATE API](#)

[SAVE](#)

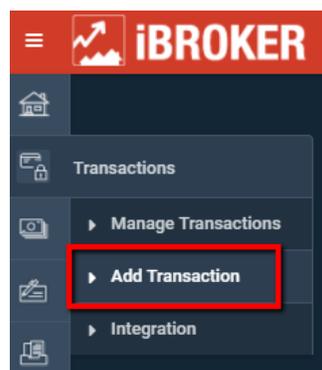

- Next, go back to where you were in iBroker (Administration > Company > 3<sup>rd</sup> Party Connections tab), ensure you selected your office from the dropdown list (as per #2 above) and right click into the API Key box. Click Paste. Then, click **Connect**. The integration is now complete!

## Turning Loops into iBroker Transactions

Converting your loops into iBroker transactions is as easy as it gets.

1. First, make sure your loop's information is complete and finalized. (Once a loop is in iBroker and you make changes to that same loop in dotloop, it won't update the associated transaction in iBroker. You would need to do so manually.)
2. Then, in iBroker navigate to **Transactions > Add Transaction**.

3. Here you will have the option to select a loop you'd like to convert to a transaction. To convert a loop, select the office to which the agent belongs and hit **Refresh**. Then, click on your desired loop. iBroker will instantly create a new transaction with all the details for that loop auto-populated from dotloop. All you need to do is fill in the blanks and save the transaction. Congratulations!

Dotloop Transactions

Add New

Skymark West Office Refresh

Select one of the transactions below or click 'Add New' to create one from scratch.

Loop Name	Loop ID	Transaction Type	Status	Last Updated
Schroeder	56107093	Purchase		2017-04-19
1408 S Vine St, Holden, MO 64040	56105462			2017-04-19
Karl & Connie Guthrie	42667760			2016-10-12
604 N Walnut Lane Lone Jack - Pinkney	47142577			2017-06-27

## Frequently Asked Questions

### Q: At what point can I sync a loop to create a new transaction in iBroker?

**A:** In iBroker, you have the ability to enter transactions in Pending status before they are closed. However, we recommend you sync loops when you are sure all information is complete and up to date, since you will not be able to sync a loop more than once. For example, if an agent updates information for a loop after the loop is synced in iBroker, you will not be able to sync again to update the information. Instead, you will have to update the information in iBroker directly. Note: You can sync loops for all statuses except for Archived.

### Q: What loop information gets brought into iBroker?

**A:** Here is a table of all the data fields we bring into iBroker from your loop:

Dotloop Field	iBroker Field	Category
Street Name	Street Name	Property Info
State Or Province	State/Prov	
Street Number	Street #	
City	City	
Property Address Country	Country	
Postal Code	Postal/Zip	
Purchase Price	Sale Price	
Contract Date	Offer Date	
Closing Date	Close Date	Participant Info
Email	Email	
Street Name	Street name	
City	City	
State/Prov	State/Prov	
Name	First Name, Last Name	
Company Name	Name	
Phone	Work	
Unit Number	Apartment/Unit	
Zip/Postal Code	Postal/Zip	
Cell Phone	Mobile	Commission Info (if applicable)
ID	No match	
Fax	Fax	
StreetNumber	Street #	
Sale Commission Split \$ - Buy Side	Selling Commission \$	
SellSideSaleCommissionSplit	Listing Commission %	
Sale Commission Split \$ - Sell Side	Listing Commission \$	
BuySideSaleCommissionSplit	Selling Commission %	

**Q: What dotloop account must I have to integrate iBroker?**

**A:** You will need any Brokerage-Level dotloop account to integrate with iBroker. Since agents do not login to iBroker, individual agent level accounts will not be supported.

**Q: If I update a transaction in iBroker, does it update the loop in dotloop?**

**A:** It does not. The sync is one way from dotloop to iBroker. iBroker does not send data into dotloop.

**Q: Is there any cost for the integration of iBroker with dotloop?**

**A:** There is no additional cost involved to set up the integration.
