

IR Receiver and Emitter Cable Kit Product Bulletin

Overview

The IR Receiver and Emitter kit lets you control your entertainment components even when they're housed in another room or equipment closet.

The kit includes a 5 VDC IR receiver and IR emitter. The IR receiver and emitter are small, inconspicuous devices that you can mount on your HDTV, or anywhere else in the room where you will want to point your remote. Both are small and very easy to hide, but must be in line-of-sight from your couch, chair, or wherever you'll be sitting when using your remote control.

When the IR receiver receives your remote control's commands, it sends them to the HDBaseT receiver, which you can hide out of sight. The HDBaseT receiver then sends the signal through your matrix switcher to your components.

Use the IR emitter when you want to control your HDTV via IR. Mount the emitter over your TV's remote sensor.

Features

- 60" black cables that are easy to connect and conceal
- Compatible with the Clare Controls HDBaseT receivers and all universal remote controls
- Sensor can be mounted using 2-sided adhesive tape provided
- Small for easy installation, concealment

Kit Configuration

Control your entire rack of equipment when it's out of sight, or in another room.
