Company Description

Enterprises are adopting and maturing their continuous delivery best practices as part of their multi-cloud and microservices journey. Spinnaker is rapidly becoming the CD platform of choice. However, its rich functionality and frequent updates can make enterprise configuration, application onboarding, and security a challenge.

OpsMx is the community's only partner dedicated to providing validated Open Source Releases, 24/7 support, and professional services to Open Source Spinnaker. OpsMx also provides an Enterprise Spinnaker distribution and a Red Hat Certified Operator. OpsMx works with several Fortune 50 OpenShift enterprises to realize the full value of Spinnaker and avoid expensive mistakes throughout their CD journey.

Product Profile

Spinnaker is a battle-tested open source continuous delivery platform created by Netflix. Open Enterprise Spinnaker (OES), provides end-to-end automated multi-cloud deployments and rollbacks for modern enterprises.

OES enhances Spinnaker with enterprises extensions enabling easier app onboarding, intelligent verification, audit trailing, compliance checks, security, and dashboards.

Overview

Open Enterprise Spinnaker is a multi-cloud continuous delivery platform for releasing software with high velocity and confidence.

Executive Summary

As enterprises embrace the digital transformation of their business, delivering innovation rapidly through software has become critical. Existing manual processes and archaic tools have become a hindrance to delivering software swiftly, reliability and securely in order to meet business needs.

OpsMx Open Enterprise Spinnaker is a highly reliable and battle-tested continuous delivery platform. With its intelligent verification, complete audit and compliance checks, and end-to-end automation capabilities, it is an ideal platform for Red Hat OpenShift users.

Statement from Partner

Delivering software securely and rapidly with confidence are paramount requirements for enterprises adopting containers and the Red Hat OpenShift platform. OpsMx Open Enterprise Spinnaker is a highly reliable and battle-tested continuous delivery platform. With its intelligent verification, complete audit and compliance checks, and end-to-end automation capabilities, it is an ideal platform for Red Hat OpenShift users.

Statement from Red Hat Connect

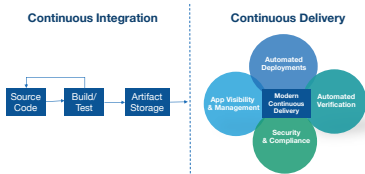

"Developers and architects looking to build new applications in, and for the cloud, or migrate existing applications to a cloud-based infrastructure, partner with Red Hat to develop and deliver more supportable solutions sooner," said Mike Werner, Sr. Director, Global Technology Partners, Red Hat. "Red Hat certification assures a supportable platform for all types of customer deployment models. Red Hat is thrilled to work with software partners like Infoblox., resulting in the world's largest open, and commercially supportable application ecosystem.

Product Benefits

OpsMx is a leading provider of Continuous Delivery platform technology for modern container and public cloud based environments.

- **Deliver Software Faster:** Increase speed of software delivery by automating end-to-end release process and eliminating custom scripts and manual steps.
- **Deploy Applications with Confidence:** Increase confidence of your complex multi-cloud applications through automated and reliable deployments and verifications.
- **Reduce Risk:** Reduce risk through automated enterprise compliance checks and audit trail of entire software delivery. Reduce the risk of using opensource software through enterprise 24x7 support from OpsMx
- **Reduce Failures and Costly Rollbacks:** Measure software readiness of applications through intelligent automated release analysis and rollback thereby preventing production failures and costly rollbacks.

Use Cases

- **Simplified CI/CD:** Achieve full automation of CI/CD processes for faster and consistent release delivery with integration to existing CI/CD tools and script-less safe deployment automation
- **Multi-Cloud Continuous Delivery:** Spinnaker allows for unified deployment of applications seamlessly to Red Hat OpenShift and public clouds targets
- **Automated Release Verification:** Avoid time-consuming and error prone manual verification of new releases with ML-based automated release verification of application logs and metrics
- **Visibility for Dev/Ops:** Get full visibility and application management for development and operations teams for faster feedback and collaboration.
