SIDELAP FASTENING DETAIL

SIDELAP INSTALLATION

VERTICAL DIRECTIONAL DETAILS

Left to Right Installation

Right to Left Installation

FASTENER INFORMATION

Overdriven fasteners will cause panel distortions.

Fasteners should extend 1/2" or more past the inside face of the support material.

Thick panels (ex. 18 ga) or supports (ex. 1/2" steel) may require predrilling of holes for screws.

Panel Fasteners:

Attaching to Wood:

#10-12 Pancake Head Wood Screw

Attaching to Steel:

≤12 ga: #10-16 Pancake Head Drill

Trim Fasteners:

1/4"-14 x 7/8" XL Stitch Screw

1/8" x 3/16" Pop Rivet

Field-Applied Sealant:

1/4" bead of SM7108

Panels must be engaged before sealant has cured.

- Theoretical section properties have been calculated per AISI 2012 'North American Specification for the Design of Cold-Formed Steel Structural Members'. I_{xx} and S_{xx} are effective section properties for deflection and bending.
 - Allowable load is calculated in accordance with AISI 2012 specifications considering bending, shear, combined bending and shear and deflection. Allowable load considers the 3 or more equal spans condition. Allowable load does not address web crippling, fasteners, support material or load testing. Panel weight is not considered.
 - Deflection consideration is limited by a maximum deflection ratio of L/180 of span.
 - Allowable loads do not include a 1/3 stress increase for wind.
- indicates that no testing is available for this condition.
