

# ENAVATE™

## SYSTEM OPTIMIZATION SUITE

The ENAVATE System Optimization Suite is a unique collection of diagnosis and optimization tools that take care of everything from data integrity, system performance and master data to security and management reporting.

**ENAVATE is ready to help you optimize your AX solution!**

## HEALTH CHECK

### Keep your Dynamics AX system in shape every day

- Quality assurance of data integrity & applications during implementation and in daily operation leads to an optimized Dynamics AX solution and improved business results.
- Built-in customer-specific templates for “on-the-fly” master data validation support end-users in their daily work and help the business in general ensure accurate master data.
- Efficient problem identification and “jump-to finding” functionality delivers improved efficiency and productivity and reduces consulting hours.
- Accurate master and transactional data improve business support and management reporting and enables informed business decision making.

## BUSINESS CARE

### Overview, insight, services and competencies provide the basis for a performance-optimized Dynamics AX platform

- Provide specific and operational insight into your Dynamics AX solution. Give an easy and comprehensive overview of the total capacity and performance of your system.
- Allow predictable capacity planning based on current use and growth trends. Provide a fact-based foundation for prioritizing processes and investments.
- Optimize performance and availability. Provide a current and a historical overview. Gather information from a large number of services related to capacity, performance and availability.
- Delivered as a service to ensure rapid set-up and deployment. Defined in accordance with ITIL framework.

## SECURITY KIT

### Efficient user management for your Dynamics AX solution

- Extend the capabilities of Dynamics AX seamlessly based on EG's extensive experience and real-life requirements for best practice security set-up and support.
- Get the full benefit from your application with efficient implementation and administration of appropriate roles, role centers, cues, etc.
- Improved functionality for design, configuration and validation in accordance with best practices and constraints, compliance, auditing and legislation such as SOX and the Privacy Act.
- Potential administration and consultancy time savings of up to 40%. Similar, potential financial savings on your licensing budget due to improved insight and overview.

## GLOBAL DATA MANAGEMENT (GDM)

### Think global, act local in your Dynamics AX system

- Extend the capabilities of Dynamics AX by supporting comprehensive Master Data Management functionality targeted at requirements for a global roll-out scenario.
- Structured data governance and distribution across your business. Ensures data control, integrity & transparency. Balances corporate and subsidiary needs.
- Improve operational efficiency and insight. Reduce manual and double data entry - save time and avoid errors. Base business decisions and reports on accurate, valid global data.
- A "one company" approach to data management. Set up any table in your Dynamics AX system. Synchronize master data, reference data and parameters.

## WITH ENAVATE'S SYSTEM OPTIMIZATION SUITE, YOU GET:

- A clear and more cost-efficient maintenance budget for your ERP solution
- Stabilization of your IT solution, putting a stop to sudden shutdowns and bad performance
- Simple and clear insight into the company's data stream, allowing you to react proactively before unhealthy data trends become an issue
- More IT specialist resources available for value creation rather than troubleshooting and data collection
- An individually tailored analysis and presentation
