

PROTECTING AGAINST CORONAVIRUS & OTHER VIRUSES

As the fear of coronavirus sweeps across the world, here are a few tips to keep you, your employees and those you serve safe.

CORONAVIRUS BELIEVED TO BE TRANSMITTED:

1. Through the air by coughing and sneezing.
2. With close personal contact such as touch or shaking hands.
3. By touching contaminated surfaces then touching the mouth, nose or eyes.

- Viruses can easily be killed with many disinfectants, so you should clean and disinfect properly with a disinfectant that has the kill claim(s) you're looking for.
- Disinfect high-touch areas frequently: toilet flushers, door handles, faucets, light switches, etc.
- Use proper handwashing techniques and wash hands often.
- Think about the fact that every time you touch a high-touch object such as a door handle or even the faucet handles, there is a good chance you now have some sort of germ on your hands. Avoid touching your eyes, nose and mouth or eating foods after touching these high-touch objects until you have had time to properly wash your hands.
- Stay away from sick people.

PRODUCTS THAT KILL CORONAVIRUS (on EPA List N)

Product Name	EPA #	Martin Bros. Item #	Dilution Rate	Contact Time	Pack/Size
Claire Disinfectant Spray	706-111	016250	RTU	5 min	12/20 oz
