

Planting a succulent wall opens up a world of possibilities.

We recommend the attached list of plants which give a great variety of color and texture and have proved to work very well in our system.

6" plants work best for a full effect. If you are happy to wait for the wall to fill out planting 4" plants will save you money.

Light and water are key to plant health and if you would like a consultation please contact us.

## Aeonium 'Kiwi'

Light:  
Suited to bright light.

Watering:  
Very little watering.  
Soil should be left to dry out between watering.
