

PunchAlert is your organization's all-in-one safety communication solution to report, manage and communicate during an emergency in one mobile-centric platform.

Quickly and Discreetly Report Emergencies

By pressing the red button, you can report an emergency to on-site responders and then discreetly share any additional emergency information through a text, photo, video, or recording.

Real Time Location Tracking

When you report an emergency, your location is sent to responders providing connected organizations real-time location tracking at the time of the emergency, during the emergency, and ending when emergency is resolved.

Rapid Response

Reducing response time saves lives. Through location awareness and mass communication, PunchAlert works to reduce response time and allow quicker resolution of reported emergencies.

Crowdsourcing Content

PunchAlert provides two-way communication during an emergency allowing all users to be involved and informed. Crowdsourcing content provides responders diverse information needed to aid in the resolution of an emergency.

Announcements

Organizations can use PunchAlert announcements to distribute safety information to users, both inside and outside of their organization.

Post Tips

PunchAlert users are able to quickly report a safety concern or 'tip' by pressing the post button as well as view other reported tips on the map and in your activity feed.

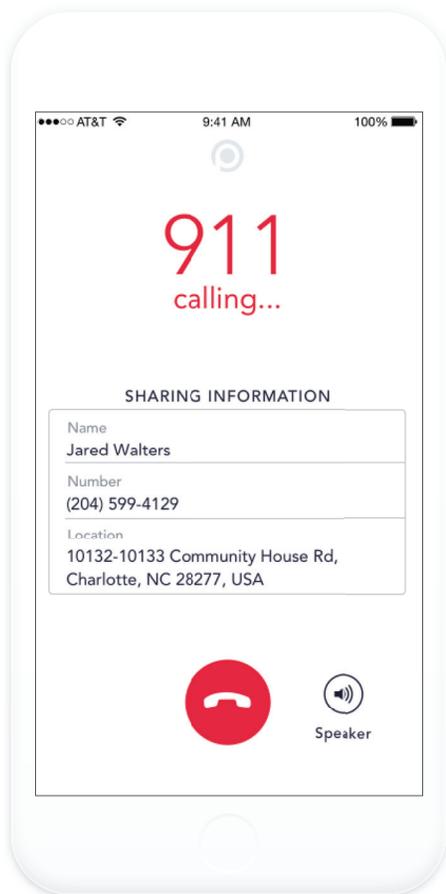

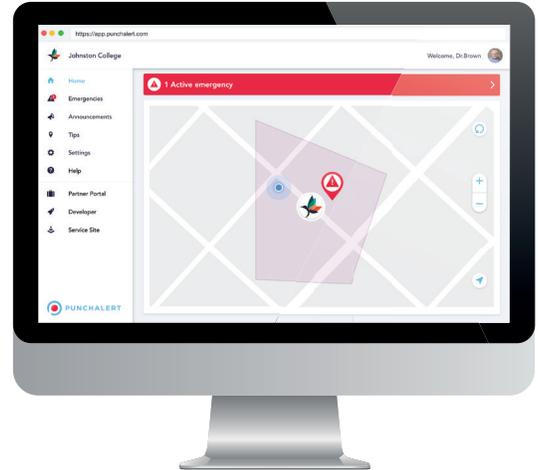

Communities • Public Facilities • Healthcare • Individuals
Education • Corporate • Government

PunchAlert Web Console & Support

Official Responders Dashboard: provides official responders the ability to view and monitor the connected organizations within their jurisdiction.

Enterprise Dashboard: provides enterprise administrators the ability to view and monitor all the organizations within the enterprise.

Organizational Dashboard: provides an administrator the ability to view and monitor a single organization – standalone or within an Enterprise.

Introducing 911+

The future of emergency communication.

Dialing 911 in an emergency is essential, but most don't realize that when you dial from a cell phone, the location received by the 911 call center is extremely unreliable. The location provided might be the nearest cell tower, which could be miles away. Often, calls are even routed to the wrong call center resulting in more critical time lost towards getting the help you need.

PunchAlert's 911+ provides the solution with a advanced technology for calling 911, which leverages GPS to automatically deliver an accurate location along with other needed information for responders to quickly locate and help the caller.
