Introducing Emergency Reporting (ER) Truck Checks

Powered by Halligan

Users of the Emergency Reporting Maintenance Module now have access to a user-friendly and convenient tool to document apparatus checks. This feature is powered by ER partner, Halligan, and has all of the features you'd expect including up to two checklists per truck, multiple checklist steps like pass/fail and equipment, and unlimited storage. Users will also have access to a shared checklist library that can easily be imported into the ER maintenance module to use on each apparatus.

For a more robust truck check tool with advanced features, upgrades to Halligan Premium are available for an additional cost. Premium features include a mobile app for truck checks that offers the ability to manage work orders and finish a checklist from anywhere. It also includes work order management, overdue checklist reminders, barcode scanning, and inventory checklists.

Both versions of Truck Checks seamlessly integrate with Emergency Reporting, eliminating double data entry, and the need to sign into Halligan separately from your ER records management system.
