

**Eiratech Robotics Press Release  
27-28 June 2017**

**EIRATECH PREVIEWS LATEST GENERATION ROBOT EIRABOT 5.0 AT DELIVER #2 IN BERLIN**

**Deliver #2, Berlin 27 June 2017 – Eiratech Robotics** ([www.eiratech.com](http://www.eiratech.com)), the Dublin-based innovator of complete goods-to-person robotics automation platforms for multiple applications, including e-fulfilment, distribution, materials handling and retail, is previewing its latest generation robot **Eirabot 5.0** at **Deliver #2 Exhibition 2017**, taking place at the **Funkhaus Exhibition Centre** in **Berlin 27-28 June 2017** .

The new generation robot **Eirabot 5.0** will play a central role in Eiratech’s automated robotics goods-to-person solution. The new robot boasts a compact design for improved manoeuvrability, while developments in hardware design will result in superior performance monitoring and battery life. Eirabot 5.0 doesn’t require the installation of any major infrastructural changes to the existing warehouse environment – such as rails or conveyors – instead relying for guidance on fiducial labels placed on the warehouse floor, and the Eirasoft management system, communicated via industrial WiFi and controlled by the on-board computer. Eiratech’s open API enables integration with virtually any legacy WMS, thereby retaining look-and-feel, and eliminating costly retraining.

“Our robotics system is designed to ‘think’, and to make the very best use of valuable personnel resources by self-organising for optimal productivity”, says **Alexey Tabolkin, CEO at Eiratech Robotics**. “Eirabot’s use of machine learning and data diving means optimal use of resources and storage space. Our system recovers wasted and costly personnel resources – 70% of which is currently used locating and retrieving goods for dispatch – for redeployment in more creative, customer-facing and productive roles for the enterprise,” says **Tabolkin**.

Eiratech Robotics is the Dublin-based innovator of a complete goods-to-person robotics automation platform for multiple applications, including e-fulfilment, distribution, materials handling and retail, and developing into a seamless, end-to-end goods-to-consumer digital e-commerce experience.

Ends.
