

## SecureBrowser

The ideal solution for secure access to your company data on the go

Soliton SecureBrowser is a dedicated multi-platform web browser that enables secure access to internal systems. Soliton SecureBrowser is the easy and secure solution for accessing company data on the go.

“If you lose the device take comfort from the fact your data is secure.”

Soliton SecureBrowser is ideal for those needing to access **company data on public WiFi's**, such as hotels or airports. Data remains secure – no VPN connection is necessary.

- ✓ Secure access to internal systems without VPN
- ✓ Supports Mac, Windows Android and iOS
- ✓ Data cannot be accessed by other apps

- ✓ Data transfer is secure
- ✓ Cache automatically erased when closing the browser or after a predetermined period of time
- ✓ Works on both computers and smart devices
- ✓ No restriction in types of data accessed

### Easy to use

Soliton SecureBrowser works on your favorite devices (smartphones with iOS and Android as well as Windows or Mac computers). It is easy to use, does not restrict the user and is lightning fast. The user interface and functionality of Soliton SecureBrowser is comparable to other browsers. Users can use Soliton SecureBrowser as their default browser without restrictions and at same time access company data through the browser. This makes for a great user experience, while staying secure. Following an easy sign-in, Soliton SecureBrowser accesses company data without the need of the complicated infrastructure that normally comes with secure access.

### Cost vs. VPN

Soliton SecureBrowser is the easy-to-use, costeffective solution to protect your company data. With Soliton SecureBrowser, there is no need to set-up and configure an expensive VPN or maintain a complicated infrastructure.

Soliton SecureBrowser only requires a single gateway server – meaning that Soliton SecureBrowser is both cheaper and easier to acquire and maintain compared to normal VPN setups.

## User experience

Soliton SecureBrowser is easy to use and doesn't restrict the user. The browser is Google Search enabled, meaning that your users will have the same user experience that they are used to from their normal – insecure – browsers.

## Stand-alone or complementing MDM

Companies using MDM solutions can push Soliton SecureBrowser as the default mobile browser on devices (for instance replacing Safari) for an extra layer of security.

## Integrations

**Soliton SecureBrowser** integrates with Soliton SecureContainer - DME to deliver secure access to links received in emails, whether internal or external.

**NetAttest EPS/AP** integrates with SecureBrowser to provide device certificates for two-factor authentication.

The **SecureFile** and **SecureDesktop** options can be added for secure access to file shares and your office desktop.

## Soliton SecureFile

Soliton SecureBrowser also integrates with Soliton SecureFile. Soliton SecureFile makes it possible to access files on company servers through Soliton SecureBrowser for a secure file access. Soliton SecureFile gives complete control of downloaded files and makes it possible to have a private file repository. Soliton SecureFile has advanced security features, such as optional copy/paste lock and Single Sign-on through the Soliton SecureBrowser.

## Specifications

|                          |  |
|--------------------------|--|
| Platform                 | Windows, Mac OS, iOS, Android  |
| Operating system version | Windows 10 / Windows 8.1 (except RT) / Windows 7SP1<br>Mac OS 10.12x / 10.11x / 10.10x / 10.9x / 10.8x<br>iOS 10.2 / 10.1-10.0 / 9.3- 9.0 / 8.4 – 8.0<br>Android 7.0 / 6.0 / 5.1 – 5.0 / 4.4-4.1 |
