# Vulnerability Management

## Reduce your risk with proactive vulnerability scans

- Unaddressed vulnerabilities are the most common reason for data breaches
  - Quickly discover, prioritize, and remediate vulnerabilities
  - Protect your clients' with continuous vulnerability management

From start to finish, Choice CyberSecurity leverages the best scanning tools in the world to perform risk assessments, identify vulnerabilities, and quickly remediate issues.

Our Vulnerability Management as a Service doesn't stop there because neither does the threat. We continuously scan and monitor your environment with a comprehensive approach that identifies software defects and misconfigurations, protects your critical assets, and secures your data.

## Minimize Exposure and Potential Breaches

We offer in depth reporting to provide a full overview of your vulnerability status, empowering you with performance and trends as improvements are made over time. This data will help you measure your reduced risk and provide proof of compliance.

Technology is changing dramatically, and everybody is plugging everything into the network. Unless you have the right tools, it's nearly impossible to understand your risk. And any device that isn't scanned for vulnerabilities could be the on ramp to a potential breach of your entire network. We have a solution that reduces risk and meets compliance.

As a fully managed solution, you can be assured that we will work diligently to stay one step ahead of the hackers to keep your systems safe and secure.

## Assess

## Address

## Maintain

### Baseline

The initial scan combs through your entire network, discovering all of your internal and external vulnerabilities.

### Remediate

After the vulnerabilities are revealed, we will prioritize the critical and high risk issues to quickly fix and patch them and to mitigate risk.

### Rescan

Once the system is brought up to an acceptable level of risk, we will rescan the systems and compare them to the baseline scan to verify the fixes are in place.

### Ongoing Scans

We will continuously scan for new vulnerabilities to maintain an acceptable level of risk so your business stays safe and secure.

### Keeping Up

We will maintain security over time by scanning and fixing the vulnerabilities and showing you comparison reports on a regular basis that prove compliance.

## Compliance and Best Practices
