Featured Services

Foundations

A full-day, interactive leadership workshop focused on the supervisor's role in an effective Safety Management System.

The modules include:

Module I Building a Proactive Safety Culture	Module II Enhancing Communication
Module III Proactive Hazard Management	Module IV Leading the Way

Industrial Hygiene Capabilities

Whether you are struggling with baseline sampling for OSHA compliance, or have a genuine concern that your employees may be exposed to airborne or chemical hazards, we are here to help! We can provide baseline sampling to identify if your employees are exposed to dangerous airborne hazards that are over the OSHA Permissible Exposure Limits, and can also provide you with recommendations to control them. We can also help you identify if you are providing the proper Personal Protective Equipment, so that you know your employees are safe! A great example of this service is providing baseline sampling that complies with the new Silica standard.

Ergonomic Evaluation

Soft tissue injuries are some of the most frequent and costly claims our clients see each year. These injuries are often difficult to manage as the construction environment is a physically demanding arena in which to work. Our team of Safety Specialists is prepared to evaluate your soft tissue injury risks at your jobsites in order to help better control soft tissue injuries. Our state-of-the-art program will help you understand where your injury risks are elevated, and help you determine the steps needed to reduce those risks.

Safety & Loss Prevention Team

- Averages 25 years of construction safety experience with MS, CIH, CSP, CHST, CSHO, CET, CRIS designations
- Provides a single point of contact to coordinate all safety and loss prevention services
- Assists to protect our clients' images and reputations
- Reviews loss trends to minimize reoccurrences

New Programs and Initiatives

Root Cause

Many companies struggle with getting to the root cause of an accident. Because of this, they often miss the big picture and end up having another similar accident. This training will teach you how to do a "deep dive" into accident investigations. To help you identify the real cause of an accident, and work towards putting systems or programs in place to prevent future reoccurrences.

J. J. Keller®

We understand that scheduling training in the midst of a busy construction season can be a challenging process. To assist in developing and delivering your internal training, we have arranged with J. J. Keller & Associates, Inc. to ensure that our insureds have access to a wide variety of free safety training videos and supplemental training materials.

This arrangement will provide you with a special client discount on safety and compliance supplies, a library of pay-as-needed online courses, and FREE access to the *J. J. Keller® Video On Demand Catalog*.

Building and Managing a Comprehensive Fall Protection Program

Managing a fall protection program in the workplace can be a fairly complicated and time consuming endeavor. ORCIG is in the process of developing a multi-module program that will assist our insureds in the development and implementation of a comprehensive fall protection program. This program will address many of the key elements that need to be evaluated such as task specific fall identification, fall equipment considerations & limitations, fall clearance evaluation, adequate rescue plans, companywide training and finally, compliance monitoring.

Additionally, many contractors are now adopting six foot fall protection policies; however, these policies are frequently not managed effectively. Consequently, the equipment utilized, coupled with the available fall clearance, do not arrest an employee's fall prior to contact with lower landing levels. As a result, many workers are at risk for serious injuries or worse. This training will instruct our insureds on the fundamentals that must be evaluated when contractors are working within six foot fall requirements. The program will also educate contractors on the repercussions of having a blanket six foot fall protection rule, but not enforcing or adhering to it properly.

Let's Build Something New

Client-Specific Training

We tailor training programs to each client's needs with client-specific training programs. If you have specific exposures, issues or concerns, we will work with you to create a program that addresses your individual company needs.

Program Review

Is your safety program up to par? Does it meet regulatory requirements? Do you really do what you say you do? If you want help learning about how to write and manage a written program, we can help you. Our Safety Specialists can identify terms and statements that could increase your liability exposure. We can then provide advice on how to update your program so that it is an effective and honest program that does not increase your risks. Please note, this is a review only. We do not write programs for you.

Additional Training Programs

- Globally Harmonized System (GHS)
- Accident Investigation
- Severe Weather
- Heat Illness
- Driver and Fleet Safety
- Commercial Motor Vehicle — General Cargo and Heavy / Light Equipment Securement
- Jackhammer Safety
- Scaffold Awareness
- OSHA-10 Safety Training
