

Stop your employees from texting & driving

Stop mobile distractions while getting valuable vehicle and driving behavior data

Cellcontrol comes ready to stop all mobile device distractions, including texts, phone calls, emails and web browsing. Emergency calls (911) are always allowed through the system, and fleet administrators can decide which mobile functions to allow in safe mode (i.e. allowing Navigation apps while blocking texts and calls) through an easy-to-use online application. Cellcontrol can also accurately detect who is in the driver's seat, and gives fleet administrators the option to block only the driver's phone, allowing passengers to continue to use their devices. Fleet administrators can also receive notifications of excessive speed, hard braking, device tampering and track the driving route of each trip, as well as associated tips on how to improve these negative driving behaviors.

Features

- *Stops email, texting and other inappropriate device usage behind the wheel*
- *Enforcement policy can be customized and scaled for complex organizations*
- *Simple exception-based management & notification system*
- *Differentiates drivers from passengers*
- *Vehicle motion activated*
- *Easy installation*
- *Patented (US9398421) technology providing enforceable protection on iOS*

How does it work?

Cellcontrol is an easily scalable solution throughout fleets of any size. Activation and installation takes only a few minutes and each company is assigned an account administrator that will work side-by-side them throughout the fleet launch and implementation process and beyond.

Compatible with Apple, Android & select BlackBerry Brew • Windows • Mobile 5/6s.
