BUSINESS PROCESS MODELING

Mapping, Measuring & Analyzing Business Processes

Overview & Outline

**Inteq Professional Business Analysis
Training Course Series**

BUSINESS PROCESS MODELING

Mapping, Measuring & Analyzing Business Processes

Organizations today operate in a complicated, complex, rapidly changing globally competitive business environment.

Business processes and supporting business systems

need to continually change and adapt to keep pace. Business processes, however, in many cases evolve informally, ad-hoc and slowly.

The result is that many business processes are a tangled web of inefficient work activities, ambiguous policies and legacy procedures that consume resources and impede performance.

These same processes, unfortunately, often provide the source for business systems requirements - requirements that reflect legacy business rules that that constrain, rather than improve, business processes.

Business Process Modeling provides analysts with the best practice techniques and methods to coherently map, accurately measure and thoroughly analyze business processes and work activities across the organization.

This deep level of engagement provides the foundation for identifying improvements and developing effective, efficient, agile forward-facing business processes and supporting systems.

Business Process Modeling transforms business analysts into high-impact professionals - professionals that connect with the business stakeholders, discover and rapidly assimilate deep business knowledge, critically analyze and challenge existing processes and deliver substantial ROI from analysis.

Inteq's Business Process Modeling training course is seamlessly integrated and cohesively organized around Inteq's BPR360/Framework™ - the Conceptual Blueprint for Business Transformation.

Inteq's business analysis training courses have emerged as the gold standard for professional business analysis training - and are simply the most effective business analysis training courses available in the industry.

COURSE OUTLINE

Business Process Modeling

- Overview and Key Concepts
- Business Processes vs. Functions
- Scoping Business Processes
