

End-to-End framework for creating advanced automated trading strategies.

RCM Strategy Studio is a software suite for developing, testing, and deploying multi-asset class automated trading strategies. Our unique framework offers the extremely low latency architecture, the rich interface, and the flexible connectivity you need to develop, test, and deploy sophisticated automated trading strategies.

Comprehensive features:

- Full tick-by-tick backtesting, live simulation, and production trading
- Fill Simulator for back testing and live simulation
- Flexible market data aggregation and order book building
- Real-time performance monitoring and results tracking
- Normalized order management
- Customizable strategy parameters, commands, and graphing
- Multiple partnerships with leading data and execution resources in equities, options, futures, & currency markets

FAST

Minimize time to market by leveraging extensive pre-built connectivity and trading functionality

Expand quickly to new markets and evaluate adding new sources of data by offloading vendor and broker integrations.

INTUITIVE

Centralize strategy monitoring, research and performance evaluation on a single, clear user interface

Reduce implementation risk by using a consistent codebase throughout the lifecycle of research through production testing. Simulate, trade live in parallel from the same data inputs.

CUSTOMIZABLE

Use a single API for multiple asset classes and trading styles.

Built to be extended and customized with an experienced team available to help build trading strategies, analytical tools, and other utilities.
