

The Ultimate in Residential Integration

Executive Summary

Look & Listen are a Brisbane based company, specialising in integrated and automated technology. They continuously look for smart solutions to deliver the ultimate in entertainment, comfort and security for their clients.

This project was for a new architecturally designed residential home construction in Carina, Queensland which required high end installations throughout multiple zones in the house.

Objectives

To create a home that both complemented the aesthetics of the property, but also looked to fulfil the client's need to create a home that "lives" the way his family does. The environment needed to become a central hub for his family to come together with systems that were easy to use for everyone.

All elements of the home design needed to be fully integrated including: lighting, wired and wireless networking, shutter, blind, louver, audio, video, security, intercom, biometric access, CCTV, fountain, climate control and more.

- Create a fully integrated and automated home that the client could control with ease.
- Create a unique experience for the family that included comfortable living along with a secure environment with keyless access at all times.
- Install easy to use audio and video entertainment distributed throughout the property.
- Maintain a high degree of aesthetic integrity to ensure all components complemented the high end decor.

Challenges

The client required high-end audio visual integrated into the architecturally designed property that fitted both with the aesthetics and design. That was a total of 11 zones requiring audio throughout the two level home.

Product Solution

The home required various systems to integrate with each other. These included lighting, wired and wireless networking, audio, video, security, intercom, biometric access, CCTV and more.

Products used across the 11 audio zones to complete the overall integration included:

- Integra 7.2 ATMOS HDMI 2.0 – DTR-40.6 x 2
- Iport Launchport iPad sleeve – Launchport AM.2 x 9
- Iport Launchport Wallstation x 9
- Sonance 6" 2-way in ceiling speaker – VP66R x 26
- Cables from Audioquest, connectors from Neutrik, racking systems from Middle Atlantic and additional products from Integra and Sonance to complete the install.

Results

The results speak for themselves. The Look & Listen project was judged Best Integrated Home at the 2016 CEDIA Asia Pacific and Global Awards.
