

OpenText Connector

Taking OpenText migrations a step further

■ Extract and import at the speed of light

At Xillio we take OpenText Content Server (OTCS) migrations beyond the capabilities of existing tools. Our ready-to-use and proven bi-directional OTCS connector extracts and imports content to and from OpenText CS at the speed of light, faster than any other connector available in the market.

■ Millions of documents per day

With performance of millions of documents per day, our connector delivers OpenText migrations as fast as possible!

'Our ready-to-use bi-directional OTCS connector extracts and imports content to and from OpenText CS at the speed of light'

Main features

- As our Content ETL Platform supports multi server and multi-threaded processing, our OpenText CS connector can run millions of documents per day!
- Does not require an OpenText Object Importer license! Rapid interaction with the OCTS back-end by directly firing REST calls.
- Extract and load from/to any content repository. No (ECM) vendor lock in!
- Supports any version of OpenText CS including legacy LiveLink and more.
- Extensive features: import of files, folders and other content types (e.g. channels, collections, discussions, Live-Reports), metadata import, Content (binaries) import, import of versions, import of permissions and import of users & groups, audit trail import and parallel import of files.
- Supports compliance requirements and auditability through custom logging at any level of detail.

Content ETL Platform

The Content ETL Platform developed by Xillio provides a simple to use, powerful scripting interface allowing our consultants or partners to do their jobs more quickly and easier than custom scripting methods. The process is quicker because of the built-in runtime environment which includes all kinds of content improvement modules such as classification, a business rule engine, versioning, de-duplication, scheduler, content mapper and more.

In addition to the reusable and ready to deploy modules, the platform offers the ability to rapidly create all kinds of connectors and content transformations scripts based on the easy Xill scripting language for customization according to specific requirements.

The Content ETL Platform puts consultants or developers in the driver's seat with a fast and flexible solution to create, choose and reuse the scripts they need to make their content

Xillio has developed the Content ETL Platform with to solve the challenges organizations face with their fragmented content repositories. The Content ETL Platform consists of a easy scripting language, Xill. It has out-of-the-box connectors to most content repositories, a Unified Data Model and unique modules, like classification and de-duplication, to improve the quality of the metadata. The platform gives organizations the necessary insights in their information landscape, the tools to improve it and the possibility to integrate their point solutions while drastically increasing their agility. Xillio is headquartered in Hilversum, Netherlands. For more information, see www.xillio.com
