

Derive fleet solutions

We optimize fleets by focusing on mission-specific vehicle safety and efficiency features. Our technology shifts the responsibility for improved safety, sustainability, and efficiency from the driver to the vehicle.

Vehicle calibration solutions

Opportunity:

Every vehicle that rolls off the production line is calibrated with one-size-fits-all settings. Yet, every fleet is different.

Solution:

Upgrade the engine's control systems with customized settings for your fleet's unique requirements.

- Improve fuel efficiency by 8-12%
- Improve fleet savings, safety and sustainability

Selected features

Govern the maximum speed to prevent speeding

Refine the idle profile to realize more efficient operations

Tailor transmission shift points to help mitigate harsh driving

Configure for proper power to save on fuel usage

Fleet safety and compliance solutions

Opportunity:

Off-the-lot vehicles do not integrate added intelligence, such as when and where the vehicle is being operated, and by whom, that is needed to effectively manage fleet operations.

Solution:

Enable fleet managers to set usage parameters that reflect specific needs for greater safety and compliance.

- Ensure the safe and compliant operation of fleet vehicles with a minimally invasive approach
- Pair each driver to their vehicle through the Derive VQ app

Selected features

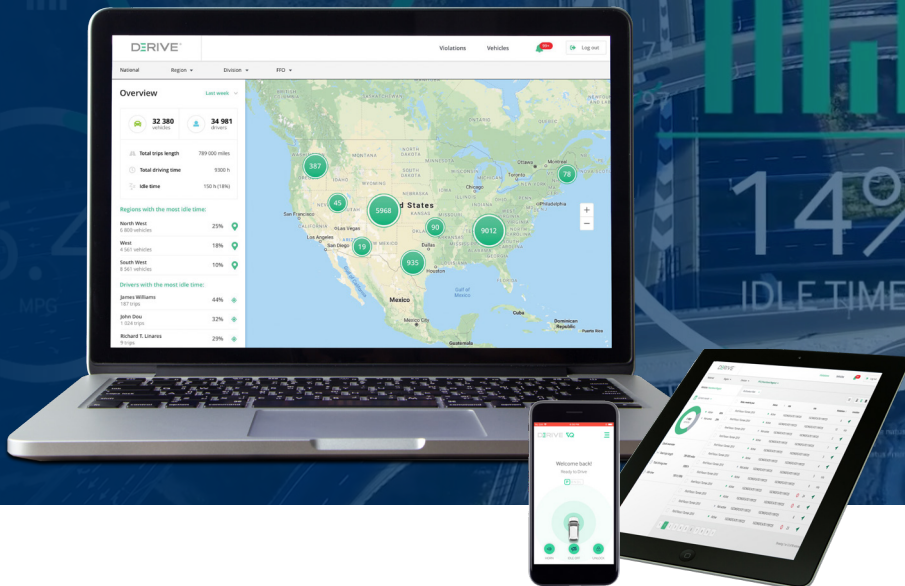

Required seatbelt usage to enable vehicle ignition

Disabled texting while driving

Hours-of-operation restrictions

Driver-vehicle pairing

Driver identification with seatbelt dependent start. Prevent distracted driving with anti-texting and anti-calling

Active Telematics and Analytics Solutions

Opportunity:

Traditional telematics solutions provide historical data that require driver training and behavior change to realize meaningful fleet operations improvements.

Solution:

Support fleet operations with real time data capture and telematics dashboard.

- Track performance with usage data and insights on a custom dashboard
- Make fleet operations more intelligent with active upgrades based on data-driven insights

Selected features

DTC tracking, analysis, and integration with maintenance programs

Vehicle location, speed and direction of movement

Manager-defined idle shut-off periods

Idle time tracking and management

Derive Mission Control™ dashboard with customized views from national, regional, and driver levels

Derive is an automotive technology company that empowers fleet managers to upgrade their vehicles by optimizing how they perform. With over 2 million software installations, Derive has transformed fleet performance from one-size-fits-all to mission-specific, going beyond traditional telematics and driver training.
