

## SuperSync Magento to NetSuite Integration

Use the SuperSync Magento > NetSuite connector to streamline the transfer of orders from Magento to NetSuite, push tracking information back to Magento, and sync inventory between the two systems.

The SuperSync Magento connector provides a real-time connection between your Magento website/s and NetSuite. With all orders flowing in from Magento and all tracking information syncing back to Magento whenever those orders are fulfilled, NetSuite becomes the central hub of data and SuperSync transports the information both ways.

Our easy setup process will have you syncing between Magento 1.0 or Magento 2.0 in no time. The Magento integration includes a lot of flexible data mappings to ensure any custom fields or other functionality built into your Magento website makes it across to NetSuite.

### Orders

- Orders
- Item Fulfillment
- Tracking Information
- Shipping Data
- Inventory
