

## SuperSync Xola to NetSuite Integration

Use the SuperSync > Xola integration to sync events through to NetSuite. Sync cash sales automatically across to NetSuite from Xola for each event. The customizable SuperSync integration flows allow for adding trigger points within Xola to push data and records into NetSuite. Whether that's syncing the calendar information or pushing payment transactions to NetSuite for each booking, the data flows between the systems and creates the appropriate transactions for processing and payment acceptance.

Xola has grown to be one of the top booking platforms online. Use the SuperSync NetSuite connector to eliminate manual entry and automate your business between Xola and NetSuite.
