

Who We Are

Securion is an expert information security consultancy creating innovative solutions to the most demanding security challenges facing companies today.

Our company was formed following a merger between two veteran security engineering and architecture consultancies, with a strong belief that security should be an integral part of any business.

With decades of experience designing, implementing and supporting some of the largest and most critical security infrastructures in the world, you can be sure our consultants have walked in your shoes and experienced the challenges that you face. This enables us to offer your organization the expertise, resources and knowledge of a full-service information security consultancy.

Let us be your long-term partner in protecting your business.

What We Do

When it comes to cyberattacks on an enterprise, it's not if, it's when. There will always be new threats and trying to fend them off can be overwhelming and a drain on your resources.

That's where Securion can help.

Our world-class team of security consultants will work with your staff to understand your company's unique challenges and make sure you're always one step ahead of any threat. Once we've assessed the threats and risks you face, we'll design and implement a dynamic security solution that leverages your existing investment in security products.

We're not a reseller that makes a profit by selling new products from our partners. We are exclusively information security consultants and are vendor neutral. That means we will find the best solution for your company, without recommending unnecessary new security products that you have to purchase.

At Securion, we believe that your security partner's interests should be aligned with your own.

Services

Network Security

Get a dynamic solution to unwanted intrusion

From anti-virus and anti-malware solutions, to firewalls and intrusion detection, our expert security engineers will use industry best practices to design and implement a comprehensive security solution using your existing systems. They'll also be on hand to lend their support in the day-to-day running of your operations, taking the pressure off your staff and making your business more secure and efficient.

Cloud Security

Keep your cloud secure and effective

Adopting cloud-based services and infrastructure greatly increases flexibility while driving down IT costs. Unfortunately, security is not the driving force behind a move to the cloud. Sensitive corporate data and applications are concentrated at one provider and make for very lucrative targets to hackers. At the same time, leveraging the distributed and redundant nature of cloud environments can leave your data spread out all over the digital globe with limited control.

From access management, to cloud architecture and design, to monitoring and protecting your critical data and services, Securion can help make your move into the cloud a safe and painless experience. We are experts at securing the cloud, and our solutions fit your needs, not the other way around. Enjoy the benefits that a cloud solution offers while Securion helps you keep your valuable data safe and your company protected.

SIEM & Security Data Analytics

Identify a threat in real time and prevent an attack

To protect your company against the evolving and sophisticated threat from hackers, you must have the technical ability to quickly and accurately compare data across numerous sources.

Securion's world-class consultants will design and implement the best security incident and event management solution to identify suspect traffic in real time. Once discovered, your SIEM solution will automatically generate detailed alerts so you can respond before any damage is done to your business.

We can then further leverage this infrastructure to automate compliance auditing requirements against internal security policies, as well as industry or government requirements. In short, automated validation means more security without additional work.

Mobile Security

Stay ahead of advancing mobile technology

From the ubiquitous smart phone to tablets replacing laptops, mobile devices are changing the entire business landscape and redrawing the security perimeter. Whether it's your top executives or entry-level employees, the demand comes from everywhere, creating a serious challenge for your business.

Our industry leading team will help you get out ahead of this evolving digital trend with an advanced, customized strategy that enables access to your valuable information without the risk of data theft or loss.

Endpoint Security

Eliminate your end user vulnerabilities

Monitoring and enforcing security standards across all devices before allowing access to your corporate resources can help to reduce end user vulnerabilities, and increase awareness about what is acceptable use of your network.

Our experienced team will build or enhance a security strategy that reduces risk from end users, with solutions ranging from client VPN access with multiple factor authentication, to desktop anti-virus, encryption, and port control.

Application Security

Develop your application to protect your business

Applications are a constant target for security attacks because of the growing complexity of modern programs. As you update your application and add functionality, the possible areas for attack grow, exposing your business to an ever-widening risk.

Our knowledgeable Application Security experts will secure your applications using a multifaceted approach that incorporates software design and architecture, manual and automated code reviews, and audits. We'll also train and educate your staff on secure application development best practices, so that they are equipped to develop new applications and code with security at the forefront. Securely coded applications reduce development and support costs. They are even easier to maintain while reducing the potential of a devastating security breach.

Identity Access Management (IAM)

Make access to your critical data seamless and secure

When you need to give your users secure access to information at the right time across multiple systems, it can present a costly and timing-consuming challenge for your business.

Our IAM experts will transform your current systems to ensure easy and secure access to your critical data, boosting productivity and cost efficiency across your business, and helping you adhere to compliance requirements.

Advisement

Receive a tailored security solution based on your business goals.

We know that the goals of your company and the challenges you face every day are unique to your business. That's why we take the time to truly understand your needs, so we can create an effective security solution to meet your goals. We are not resellers pushing security products, and so we will deliver this comprehensive solution as vendor neutral consultants, leveraging the systems and IT investments you have in place.

Security threats to large companies are becoming increasingly complex, but with industry leading knowledge and decades of specialist experience in information security, we are the partners you can trust to keep your organization's digital security safe.

Some of the largest organizations in the world have trusted Securion to help protect their business against the toughest security problems.

We'd love to do the same for your company.

"Securion's only focus is in trying to help us overcome our security challenges, not trying to sell us another product.

That is why we keep using them."

Manager of Security Engineering

Fortune 100 Financial Services Industry

"Our company grows by acquisition, which means we have a multitude of security products to manage, support and eventually consolidate. Securion's staff augmentation services give us immediate access to experienced security experts right when we need them."

Chief Information Security Officer

Fortune 50 Banking & Finance Industry

"Securion's IAM (Identity Access Management) consultants knew more about the product and how it worked than the manufacturer. They were the X factor in making this project successful."

Information Security Officer

Fortune 500 Insurance Industry

"We lost a couple of key members of our staff and we struggled to fill those positions. Critical projects were in jeopardy of missing their deadlines and we were falling behind on our day to day work. Securion worked with us to understand our needs and provide just the right solution of engineering consultants to get us through that difficult time"

Director of IT
