MOBILE SECURITY

Harness the power of mobile technology without harming your business

Powerful smartphones and tablets have become the device of choice for stakeholders, from top-level executives to entry-level employees and contractors. These wide-ranging devices are far more flexible, and have come to replace laptops as an easier way for employees to access your corporate data and resources.

This change in the business landscape presents a significant challenge for your IT staff because each one of these devices has differing needs and levels of access requirements. This is made even more challenging when employees use their own personal devices.

This shift in user behavior is redrawing the security perimeter. And with mobile technology advancing at lightning speed, the security threats your organization is facing are growing just as fast.

"Executives don't want to carry laptops when they travel anymore — they want to access sensitive financial data from the tablet that their 16-year old was using to play games with last weekend."

SECURITY WEEK

With our industry-leading mobile security solutions, you'll always be one step ahead.

Securion will create a dynamic mobile security solution that will enable your business to take advantage of the increased productivity and efficiency that comes with mobile technology. Our experienced and knowledgeable team will do this leveraging your existing systems, transforming them to keep your company data safe and allowing you to seamlessly control user access.

When you offer your workforce an effective mobile solution, you are empowering them to work smarter and faster.

Secure by Design

With decades of experience securing some of the largest IT infrastructures in the world, our ability to understand the unique needs and challenges of your business enable us to design and implement a security plan that fits into your existing infrastructure, and helps you achieve your goals

Securion's mobile security solutions can leverage existing directory services, like Active Directory, to create uniform access policies and authentication schemes, or endpoint and data encryption solutions to protect your valuable company information wherever it resides. This reduces costs and increases security awareness through a consistent security experience across all computing devices.

"More than half of organizations say that employees regularly sacrifice security in exchange for the efficiency enabled by using personal mobile devices to get work done in the office and at home."

THREATPOST

Here are just some of the benefits and capabilities our innovative mobile solutions will bring to your business:

- **MOBILE DATA ENCRYPTION** - Reduce helpdesk requests, improve user experience and protect your company information no matter where it's being accessed

- **MOBILE DEVICE SECURITY** - Identify threats before they become a problem and improve your guidelines for what is appropriate use of your data

- **APPLICATION MANAGEMENT** - Rapidly deploy, manage, and segregate corporate applications and data, without affecting the mobile users' own personal data and applications

- **COMPLIANCE & AUDITING** - Automate your business requirements by easily adding functionality for compliance enforcement and regulatory auditing

- **BRING YOUR OWN DEVICE** (**BYOD**) - Protect your company data and resources by securing your employees own personal devices

We'd love to show you how we can help your business stay ahead of advancing mobile technology.
