SECURION

PENETRATION TESTING

Put your business to the test and find unknown threats

The growing reliance on Internet enabled applications, services and products is exposing businesses to complex security challenges and greater risk.

These applications and services need to communicate with each other, but are vulnerable to exploitation, turning them into gateways to your entire network. This can give hackers control of a massive amount of infrastructure and access to a wealth of services, data and your company's bank account.

Many of these vulnerabilities are unknown by software or service vendors, which can result in a surprise cyberattack on your business that cannot be patched.

"The bad guys are smart, well equipped, and determined. There's no reason that the good guys can't be the same."

Mandiant

Our rigorous penetration testing puts your business through a real-world test so you can identify where your weaknesses lie

"96% of the incidents fell into one of nine basic patterns."

Verizon DBIR

Securion's world-class engineers will discover and exploit unknown vulnerabilities in your services or applications, with a tailored penetration test that goes beyond scanning for risks. We essentially attack your software and services in the same way a hacker would.

And once we've exposed these hidden threats, we can then help remediate the issues or implement additional security controls to mitigate the risk. We can also assist in code reviews, and set up static and dynamic code testing to eliminate the vulnerability.

When you understand the potential vulnerabilities in your people, processes and technologies, you can prevent a devastating breach from occurring.

Secure by Design

With decades of experience securing some of the largest IT infrastructures in the world, we combine focused security expertise with a methodology that ensures efficient, innovative solutions to match your organization's strategy. This dynamic approach to everything we do enables security, information and technology to move at the speed of your business.

Industrial control attacks are up 110% over last year, a trend that is unfortunately accelerating upwards.

Here are just some of the benefits and capabilities our unparalleled penetration testing will bring to your business:

- **EXTERNAL TESTING** - Be alerted to which of your Internet-exposed applications or services is vulnerable, so you can act before hackers exploit them

- **INTERNAL TESTING** - Find out which of your internal or private extranet applications and services are at risk, so you can prevent a data breach

- **CLOUD TESTING** - Join some of the largest web services on the planet and let Securion secure your cloud with our with world-class penetration testing

- **INDUSTRIAL IOT / SCADA / ICS TESTING** - Identify vulnerabilities in your industrial and distributed control systems before a cyberattack occurs

We'd love to show you how we can protect your business from a devastating breach with our world-class vulnerability testing that reveals your hidden risks
