SECURION

SIEM & SECURITY DATA ANALYTICS

Harness information and protect your business with security data intelligence

Organizations are faced with a rapidly evolving and sophisticated threat from hackers. In order to defend your company effectively, it is important to have the right systems in place, and the technical expertise to correlate security data from numerous sources.

Collecting log data across your IT systems and consolidating it with third party sources is crucial to gaining the full picture of your security environment. This vital raw information can be turned into actionable remediation tasks, and brings much needed clarity and awareness to security events.

Our powerful SIEM and security data analytics enable you to identify threats in real time, so you can prevent an attack from happening

"Unfortunately, collection and analysis of evaluated intelligence is a rarely-prioritized requirement for leaders seeking to bridge the gap between business and the cybersecurity operations they manage."

DARKREADING.COM

Securion's industry-leading experts will work with you to design and implement an incident and event management solution that identifies any threats to your business in real time. This dynamic SIEM solution will generate alerts so you can take action to prevent an attack, avoiding serious damage to your business.

Our experienced team will then leverage this system to automate compliance to internal security policies, as well as industry or government audit requirements.

When you automate the collection and detection of security events, your business becomes more secure, without additional workload.

By visualizing your security data, you can more effectively and efficiently respond to an event - minimize damage and loss.

Secure by Design

With decades of experience securing some of the largest IT infrastructures in the world, we combine focused security expertise with a methodology that ensures efficient, innovative solutions to match your organization's strategy. This dynamic approach to everything we do enables security, information and technology to move at the speed of your business.

Here are just some of the benefits and capabilities our dynamic SIEM and security data analytics solutions will bring to your business:

- **SIEM** - Minimize damage to your business and gain real-time clarity on internal and external threats, with a comprehensive event notification and log monitoring solution

- **THREAT INTELLIGENCE** - Mitigate risks to your business with integrated third party threat data that shares information about the potential source of an attack

- **CLOUD BASED LOGGING** - Create a tailored logging solution for your cloud infrastructure that enables greater operational intelligence and cohesive security at a reduced cost. Includes products like SumoLogic, Spunk Cloud and IBM QRadar on Cloud.

- **COMPLIANCE AUTOMATION** - Reduce your chances of a data breach and minimize your risks with automated compliance monitoring.

  Our experienced consultants can help with compliance to various industry and government standards such as PCI DSS, GLBA, HIPAA, SOX, COBIT, NIST

- *Organizations can investigate only 56% of the security alerts they receive on a given day*

- *Half of the investigated alerts (28%) are deemed legitimate; less than half (46%) of legitimate alerts are remediated*

- *In addition, 44% of security operations managers see more than 5000 security alerts per day*
