CLOUD INFRASTRUCTURE

## VIRGIN MANAGEMENT

### WHO

Virgin Management Limited (VML) provide advisory and managerial support services, identify new brand investment opportunities and manage the global licencing of the Virgin brand.

### WHY

With a highly mobile workforce and an impending office move, VML required a new IT infrastructure that would offer complete flexibility, and allow secure access to company data from any location, over any connection and on any device.

Its existing infrastructure was restrictive and unreliable, so to ensure successful adoption of its new systems, VML also wanted a global IT support partner to build a relationship with.

### HOW

To enable the “anywhere office” VML required, we recommended a cloud-based server infrastructure and virtual desktops, using our own Infrastructure as a Service platform. We now host all of VML’s servers, applications, emails, files and data in the Codestone Cloud. Wherever there is an internet connection, any member of VML’s staff can access the information they need on any device, anywhere in the world.

By rebuilding and hosting everything ourselves, there was no need to replicate the previous “on premise” IT facilities at VML’s new offices. Furthermore, to ensure there was no downtime for the business we had the new system up and running in parallel before the office move, so when staff arrived at the new location, they could log into any desktop or other device and continue working immediately.

We continue to empower VML’s operations around the world, and have permanent members of staff on-site to assist its in-house IT support team.

“Codestone helped create my vision of a *“Martini Solution”* we wanted a solution that worked anytime, any place, anywhere on any device.”
