

The TempArmour™ Vaccine Refrigerator

Exceptional Vaccine Protection for VFC Providers

- Purpose-built, pharmaceutical grade, stand alone refrigerator
- Meets VFC & CDC requirements and recommendations
- Proven technology in USA since 2012; Technology pre-qualified by the World Health Organization

TempArmour™ Design & Technology Eliminates Common Refrigerator Issues:

- No temperature spikes when door opened
- Chest style eliminates “door left ajar” and freezing episodes
- No cold spots throughout the refrigerator which means vaccines can be placed anywhere in the refrigerator; no spacing between vaccines required
- No water bottles required as the refrigerator’s thermal phase liner provides similar, but more effective temperature stabilization.

6 Days of Protection during Power Outages:

Maintains its temperature within the required range for up to 6 days during a power outage or if unit is accidentally unplugged. No batteries or generator required.

Digital Data Loggers (DDLs)

One VFC compliant digital data logger (DDL) is included with the TempArmour™ Refrigerator (note: at least one backup device is required and additional DDLs can be ordered with the TempArmour Refrigerator)

Vaccine Organization:

A vaccine organization system is provided with the TempArmour™ Refrigerator to effectively identify, organize and separate vaccines. The organization tools include 3 top baskets, 2 bottom baskets, a vaccine layout diagram, dividers, trays, tags, color coded handles and labels.

Capacity of TempArmour™ Refrigerator:

Holds up to 200 boxes of 10 x 0.5 ml vials or 70 boxes of 10 single dose syringes (based on typical manufacturer box sizes). Comparable to typical recommended capacity for 21ft³ upright models.
