

SPONSOR

Threshold Group is a family-owned wealth management firm that serves high-net-worth families, individuals, and private foundations across 25 states from offices in Seattle, WA, Gig Harbor, WA, San Francisco, CA, and Philadelphia, PA. Ranked among 2014's Top 50 Wealth Managers in the U.S. by Forbes magazine and with over \$3 billion in assets under management, Threshold provides investment management, family office administration, and financial and philanthropic planning along with access to innovative impact investment opportunities that align with client values. Approximately \$1 billion, and growing, is managed on behalf of clients who are aligned with impact or mission-related investing, spanning a broad range of asset classes, geographies, social and environmental issues. Threshold Group was founded and is owned by the Russell family, which created the global investment services firm known today as Russell Investments. While most often recognized for its stock indices, Russell Investments' core competency was built through decades of excellence in the evaluation of investment managers. Data based on assets under management as of 12/31/2015.

CONTRIBUTOR

Canopy builds social and economic infrastructure to align capital markets with community outcomes. While the globalization of markets has dispersed investments around the world, Canopy wants to bring capital back home to strengthen communities. Through a unique collaboration, Canopy is identifying opportunities for investors to put capital to work locally in innovative ways by bringing together diverse stakeholders to leverage capital in building a regional investment ecosystem that benefits communities and creates financial returns. Canopy members are sharing in the costs of sophisticated institutional research that can surface regional investments while developing a new generation of investment managers through education and training, who can run these specialized funds. By building capacity, Canopy is ensuring a long-term pipeline of regional investments that can withstand the rigor of institutional due diligence and attract new sources of capital. Most significantly, Canopy is changing the conversation about how institutions and individuals put their capital to work to deliver community-defined and financial outcomes. www.investcanopy.com

AUTHORS

John Hull, Executive Director of the Business Innovation Institute and Asst. Dean for Centers of Excellence, Lundquist College of Business, University of Oregon. John has over twenty years of industry experience, including more than ten years of venture capital and corporate strategic investment experience based in Oregon. Hull was the first partner within Nike's Sustainable Business and Innovation (SB&I) Lab, Nike's strategic investment program. Prior to Nike, Hull was a managing director at OVP Venture Partners where he sourced and managed investments in early-stage startups for OVP fund VI (\$185M) and OVP fund VII (\$250M). Before OVP, Hull was the director of the Intel Communications Fund, a \$500M strategic investment fund. During his tenure, the fund invested in over 125 venture-backed companies. He received his MBA from the University of Michigan and his BS from the University of California at Davis. John has also earned graduate and general certificates from the NASBIC/NVCA Venture Capital Institute.

Dr. Michele Henney, Program Manager, Finance and Securities Analysis Center & Senior Instructor of Accounting, Lundquist College of Business, University of Oregon. 2014 Chair, Oregon Society of Certified Public Accountants. Dr. Henney earned her PhD at the University of Oregon and her MS from Golden Gate University. Her BS was earned at CSU Chico.

Nathan Lillegard, Program Manager, Lundquist Center for Entrepreneurship, Lundquist College of Business, University of Oregon. Nathan was founding CEO of Floragenex, a genomics research company based on technology developed at the University of Oregon. Nathan earned both his MBA and BA degrees from the University of Oregon

INTRODUCTION

he Growth Capital ecosystem surrounds us all in the Pacific Northwest, yet it is well understood by a limited few. For those brave entrepreneurs who seek support of regional investors, the pursuit of available capital sources can be a daunting and painstaking task of incremental discovery at a time when speed is of the greatest value. Further, for those institutions who seek to put their financial investment resources to work in their own geographic region, there is little help available to identify the areas of opportunity - where investment capital is currently scarce and may be constraining new company formation and growth.

The purpose of the Pacific Northwest Capital Scan is to gather and present a summary of regional growth capital, in its many forms, in order to allow business leaders and institutional investors to better align the application of their resources. Investment capital may be seeking returns, impact, or both. Growth company leaders may be seeking sources of investment capital that will enable them to build successful enterprises and create wealth for themselves, their communities, and those who invest in their venture. A gap in knowledge of the available growth capital and opportunities leads to an inefficient ecosystem where much time is lost in the discovery phase for both parties. The Pacific Northwest Capital Scan is a map for all to help expedite intelligent engagements.

This report builds on previous works including the Oregon Capital Scan: A Line is Drawn report published in 2014 and the Oregon Capital Scan: A Developing Ecosystem report published in 2012. Both of these reports addressed similar objectives within the State of Oregon and were sponsored by a consortium of regional foundations, State economic development organizations, and the State of Oregon Treasury. This new report broadens the investigation region to the Pacific Northwest as defined by the inclusion of the States of Alaska, Idaho, Oregon, Montana, Washington, Wyoming, and the Northern Counties of California. The report also reports on data, where available, for the Canadian province of British Columbia.

Published in March of 2012, the first version of the Oregon report determined, through an exhaustive set of qualitative interviews, some of the major gaps in the capital ecosystem in the State. Gaps identified were: (1) Seed Stage Capital gap; (2) Growth Capital for Bootstrapped Businesses gap; (3) Clean Technology gap; (4) Life Sciences gap; (5) Growth and Turnaround Capital gap; (6) Working Capital for Growth of Small Manufacturers gap; (7) Micro-Lending gap and (8) Non-Bank Loan Capital gap. Among topics listed for further investigation were a more detailed quantitative assessment of cap-

ital sources and amounts available including, State, Grant, Angel, and Banking Capital. The next version of the Oregon Capital Scan report provided greater quantitative visibility into the specific flows of capital for growth and company building in the State. That report added an additional six conclusions specific to Oregon: (1) the capital gaps from 2012 Oregon Capital Scan report continue to exist - but the trend is improving; (2) more capital sources are available in Oregon than most entrepreneurs commonly know – better communications are needed; (3) business capital ladder education is a gap; (4) top of the funding funnel (angel/seed/incubators/accelerators) has seen significant improvement; (5) there are still too few resident venture capital, private equity and mezzanine funds dedicated to sourcing investments in Oregon; (6) crowdfunding is a new and growing part of the funding ecosystem; and (7) foundations present a significant capital source to in-state mission aligned growth businesses as Mission-Related Investment (MRI) activity becomes mainstream.

This work, commissioned by the Threshold Group, with contributions from Canopy, is an effort to enhance the opportunities for investment in business formation and growth in the Pacific Northwest through a better understanding of the capital sources and gaps. Entrepreneurs, investors, business and community leaders, as well as policy makers may all benefit from a greater awareness of the variety of funding sources as well as their relative scale.

Who should read this report?

number of constituencies will benefit from the information in this report. It was written with the primary intention of helping to educate regional foundations, endowments, family offices and other investors with respect to the accessibility of growth capital in the Pacific Northwest. Secondarily, this report is beneficial to entrepreneurs and growth company leaders seeking capital sources currently available in the region. It is not uncommon for those seeking to enter the capital markets as an entrepreneur to possess a limited understanding of where capital can be found, the types of capital available, and investor expectations. We, the authors, assert that this knowledge gap leads to a level of perceived risk uncertainty that inhibits company formation and growth which thereby limits opportunities for investment by regionally focused institutions.

This report is also intended for policy makers and those who work to support the development of a thriving growth company ecosystem in the region. This includes the sponsors of this report and their clients who seek to find new ways to bring together education and resources to enhance the ability of those who choose to build their companies in the region. This report can serve as a baseline of quantitative data that may help everyone to better understand where we are as a region now, with respect to the key ingredient of growth capital, and help us measure our progress and improvements over time.

PRIMER ON CAPITAL SOURCES

he Pacific Northwest region's growth capital ecosystem is composed of a number of providers with varying investment profiles, tools and tactics. Perhaps what is most relevant for the aspiring company builder or policy maker is that they must understand that funding a new or growing enterprise may require a portfolio of funding sources and that no single source will provide all the capital required. For those who lead foundations, endowments or family offices who are seeking to apply their capital in support of new company formation and growth, there is a requirement to understand the community of alternative funding sources. Once understood, actions can be taken to either co-invest using parallel financial vehicles or apply grant-making activity to deepen the ecosystem's functionality and geographic spread. For example, hosting educational forums which bring together various funders and funding seekers in order to promote a better working understanding of each other's needs. Because companies face differing risk profiles over their developmental lives, there will be different capital sources tailored to meet the risk profiles of companies

at each stage.

Business funding ladder defined

As a business develops, it will move up and to the right along the continuum shown in Figure A - a concept we refer to as the business funding ladder. A company's location on this continuum is not necessarily related to the age of a business. Rather, the needs for research and development, growth and expansion, and liquidity of shareholders and investors often drive the type and amount of capital needed. What has repeatedly been heard from entrepreneurs from across the region has been a concern for how one moves along this continuum or "climbs the

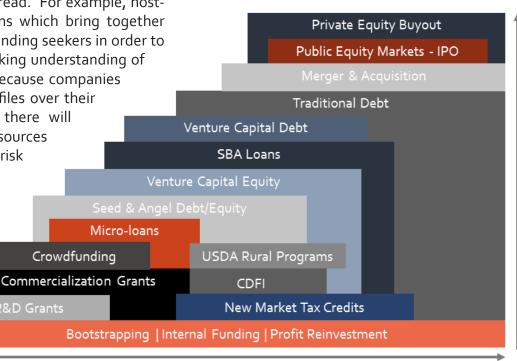

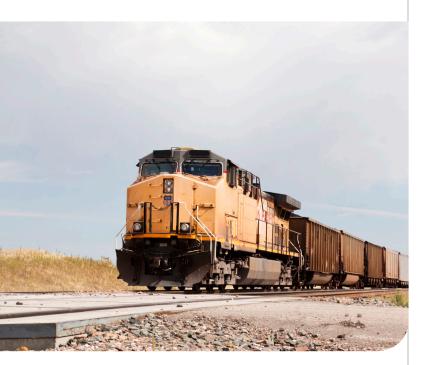

Figure A: Business Funding Ladder

TIME

funding ladder". Or how to approach the vendors of funding and present the appropriate indicators of readiness. When there is a gap or if entrepreneurs lack the expertise to access the next rung, the company either stalls out or looks toward outside funding and may be required to relocate. A greater footprint of resident capital should be encouraged by policymakers as any steps taken to reduce the challenge of fundraising would yield more start-ups, more growth companies, and greater employment as a result.

Within the business funding ladder, each type of capital fits different needs for developing a business and has different norms or requirements for accessing the capital. Highly experienced business leaders understand the unique attributes of each type and are adept at positioning their company's status and story to attract the targeted capital source. For the new business

leader, the unknowns inherent in this continuum can present a very serious impediment to company growth. The question of how to better understand the differences between the capital sources and their expectations is an area for policy makers, mentors, funders, and educators to address. In some regions of the country It it is not the abundance of investment capital that spurs new company growth and formation, but rather the abundance of like-minded risk takers and mentorship networks that embolden and enable those with ideas to launch and grow their companies.

- Silicon Valley being the best example - the expertise and experience with the funding ladder is ubiquitous in its availability. There, it would not be uncommon for a neighbor to be an experienced start-up CEO, a friend to be a start-up attorney, the parent of a child's classmate a venture capitalist and the person on the treadmill next to you at the health club a venture banker. In the Pacific Northwest, the atmosphere of service providers and experienced role models may be less developed, but it is beginning to exist in more dense urban cities like Seattle, Portland and Vancouver. The recent rapid growth in incubators, accelerators, co-working spaces, and educational forums for entrepreneurs is lowering this knowledge hurdle. Still, more can be done to encourage those who might start and grow a business – and keep it – in the region. We refer the reader to the definitions of the various funding types of the business funding ladder found in the Oregon Capital Scan – A Line is Drawn report from 2014. See the glossary of this report for definitions of the various funding types within the business funding ladder.

In this report, we add to the body of knowledge by discussing the implications of the business funding ladder to those who seek to develop the ecosystem and profit from its health. Namely, foundations, endowments, family offices and other investors who share a mission interest in

the health of the regional ecosystem. For these groups, the knowledge of the community effort required to jump-start the healthy growth business cycle is a key hurdle to having more opportunities to invest for mission and return. Recent research has underlined this point. In an article published by Knowledge@Wharton in October 2015, authors Linda Rottenberg and Chris Bierly report on research into entrepreneurial ecosystems and found that the best incubator for entrepreneurship occurs when entrepreneurs form close networks and nurture fellow risk-takers with their experience and resources¹. While this may sound intuitive, it has only been the recent emergence of a vast number of incubators, accelerators, and shared co-working space options in many cities in the Pacific Northwest that an uptick in the number of newly formed companies have presented themselves. The conclusions indicate that it is not the abundance of investment capital that spurs new company growth and formation, but rather it is the abundance of like-minded risk takers and advisory/ mentorship networks that embolden and enable those with ideas to launch and grow their companies. Of course, at some point, capital becomes a necessary accelerant and a local investing network is a key ingredient to retaining growing companies in a region.

All of the aforementioned capital source types have a series of stage-appropriate norms and regular deal sourcing and validation networks that the entrepreneur and ecosystem enabler are well served to study. The simple truth is that each of these funding sources regularly reviews vastly more potential investments than they have an appetite to consummate. Any prospective investee that is non-conforming to the preferred profiles of investment is quickly dismissed as overly risky by virtue of their lack of knowledge. As in the real estate market, much can be said for understanding the "comparable transactions" and knowing your buyer's needs. At the same time, these investors would be wise to allocate time to the general training of the entrepreneurial community in order to help the

"investee targets of the future" to do the things now that will help them be viable when they are ready to engage the investor. This is a place where foundations, endowments, and family offices, who are so inclined because of their mission, could become the conveners of forums to allow for the networking and cross-training to occur. Either by creating their own forums or by making supporting grants to regional entrepreneurial support groups and/or angel investing network forums that include training curricula. They could also support regional investment by becoming direct investors in growth companies or by becoming limited partners in investment partnerships whose charter includes a regional focus. This report includes a listing of some of the regionally focused professional private investment funds in Table 19.

FINDINGS SUMMARIZED

he following table summarizes capital flows in the Pacific Northwest. More detailed data can be found in the Findings section of the report. The summary table represents the cumulative data sets from throughout the report in a single presentation. The reader should use caution in reviewing this summary as there includes a mix of time periods and, in some cases, aggregated data is shown where regional breakdown was unavailable. Do not attempt to add up all the rows for a total as this would be mixing of complete and incomplete data as well as mixing some time periods. For example, the Kickstarter data represents only a single year, 2013, and only one of many crowdsourcing companies whereas the SBA loan data represents all sources for the combined 2013 and 2014 time-period. The table is best used as a way to understand the relative scale and variety of funding sources available within the region.

Note: See Glossary for definitions of sources of capital

CONCLUSIONS

The capital gaps from 2012 and 2014 Oregon Capital Scan report exist throughout the Pacific Northwest – but the trend is improving.

he eight gaps identified in 2012 continue to exist at varying levels of severity and discussions with entrepreneurs in the region support the conclusion that there remains insufficient funding sources for:

- Seed stage capital
- Growth capital for bootstrapped businesses
- Clean technology focused funding sources
- Life sciences focused new venture funding
- 5. Growth/turnaround capital for the "formerly banked"
- 6. Working capital for growth of small manufacturers
- 7. Micro-lending
- 8. Non-bank loan capital

What our updated research shows is that the extent of the gaps for seed stage capital (Gap #1) has narrowed with the creation or growth of a number of seed and angel groups in the region. While there is never enough capital to satisfy everyone, we are moving closer to being able to fund the most worthy projects. Venture Capital and Private Equity capital (Gaps #3 & #4), however, remain scarce.

Business funding ladder education is a gap - and so are the educational resources for new fund managers.

merging growth company ecosystems are most successful when they possess an active community of new and seasoned players collaborating together. A community of support is vital. When those seeking funding, advice, mentorship, and guidance are surrounded by those who have experience, then something magical happens: people take risk and that risk can be properly managed. The same is true for new investment fund managers. They can possess the skills to assess investments, to coach start-up teams, to build companies, but it requires an additional kind of knowledge to access institutional investors and their consultants. They must be able to gain access to those investors and their consultants. They must also be able to provide the full and complete set of investment fund proposal and diligence documents that will simplify and reduce the costs of diligence.

Bringing capital providers into greater contact with entrepreneurs and providing education on expectations and norms will help increase the quality of the emerging growth funding ecosystem. Bringing institutional investment consultants into greater contact with emerging regional investment fund managers and providing training on documentation required for due diligence and assessment will help increase the quality and number of regional investment fund managers. A virtuous cycle will follow.

Crowdfunding is no longer new. Today, it is the onramp to building a business and soon will be larger than venture capital in funding scale.

Top of the funding funnel (angel / seed / incubators / accelerators) has seen significant improvement.

he number of Angel and Seed investors has been growing steadily in the Pacific Northwest in recent years. The number of incubators, accelerators, and co-working spaces has also been growing rapidly in the urban core as well as the secondary cities in the Pacific Northwest. This is a very positive trend that may yield a substantially greater number of high-quality investment targets for regional investment funds as well as regional institutional investors that act as limited partners and, sometimes, direct investors.

rowdfunding market analysts have predicted that 2016 will be the first year in which the total dollar amount of crowdfunding will exceed that of the venture capital asset class². The implications for investors and for those seeking funding are profound. Crowdfunding as the new model of first market testing for a new product or idea will reduce the risk exposure for seed and venture capitalists - allowing them to see initial market interest before committing institutional funding. For investors and institutions, crowdfunding creates a new market for deployment of capital, either as a grant or as in many crowdfunding models, in exchange for debt or direct equity. In the coming years, we may well see institutional investment quality crowdfunding platforms that combine the benefits of large scale exposure and market testing with the assets and investment scale of institutional investors.

Foundations present a significant capital source to regional mission-aligned growth businesses as mission-related investing activity becomes mainstream.

nother emerging category of funding opportunity can be found in the Pacific Northwest's foundations, pensions and endowments. As they become more sophisticated in how mission-related investing might be applied, not as a charitable exercise as program-related investing is considered, but as a market-rate return strategy that is aligned with the mission of the organization, they can unlock significant financial power to further their desired impact mission. This will require the addition of a uniquely trained set of professionals who can apply the best of the financial fiduciary portfolio management skills with an ability to assess, manage, and extract mission impact value in concert with desirable financial returns.

Institutional investors can unlock significant financial power to further their desired impact through missionrelated investing activities.

RECOMMENDATIONS

eturning to the introductory question of Who Should Read This Report?, the following recommendations are primarily directed to investors, policymakers, the sponsors of this report, and those who seek to support economic development opportunities in the Pacific Northwest.

Invest in the foundational building blocks of the company formation ecosystem: entrepreneurial support organizations, accelerators, co-working spaces and the communities that form around them; the seeds that create viable returns/mission-aligned investment opportunities.

rantmaking organizations should increase their grants to those entrepreneurial support organizations in their region. Institutional investors should look for investment opportunities in this community of support organizations including real estate opportunities in the rapidly growing co-working domain.

We've seen an increasing set of accelerators, incubators, co-working spaces, and targeted entrepreneurial support organizations in the Pacific Northwest. These organizations are the seed bed for new company creation and support. Grants to those with a non-profit profile can enable more for-profit companies, and therefore targets for investment fund managers, to blossom. We have seen this cycle present itself in cities like Portland and Seattle, with early signs appearing elsewhere, where a supportive set of community providers helped launch a generation of companies that are now coming to maturity and spinning off the experienced business leaders and investors that are helping the next generation. Some of these talented individuals are becoming the focused investment fund managers in the region. These funds are the vehicles for institutional investors with a mission interest in the region to put returns-based capital to work in their region. More successful companies will encourage even more business people to start companies.

Once vibrant ecosystems gain this self-reinforcing momentum, then we typically see specialty funds/investors targeted at underrepresented groups and diversity-focused initiatives that bring more participation and fresh ideas to the ecosystem.

Better measurement systems and standardized impact assessment tools are needed in order to quantify the mission returns component of investment opportunities.

ne of the biggest impediments to regional institutional capital being invested locally is a good system for measuring local impact in a financially legitimate and uniform way. The standard financial returns metrics are well understood and fiduciary responsibility of institutional investors can be measured with accuracy across asset classes and portfolio strategies. What is missing is a similar set of tools and metrics for these investment managers to make a clear and comparable measurement of regional economic impact or mission impact. There have been some early attempts at standardizing a quantified measurement system including: "What Counts: Harnessing Data for America's Communities" published in 2014 by the Federal Reserve Bank of San Francisco & the Urban Institute. The Global Impact Investing Network (GIIN) has also assembled a knowledge library on their website: https://thegiin.org/.

One of the missing ingredients is the training/resources, model documents, and example supporting diligence practices that institutional investors expect from experienced fund managers.

Better resources and knowledge sharing tools are required to help managers successfully launch investment funds with regional and mission objectives.

significant impediment to having a rich set of regional/local investment managers operating in regions other than the traditional venture hotbeds of Silicon Valley, Boston, and New York is the availability of high-quality, experienced fund managers in more regionally diverse areas. There are successful business leaders in nearly every area of the country, but most have grown up on sources of funding other than traditional venture equity investment. Further, there are fewer experienced fund managers available in the Pacific Northwest outside of Seattle and Portland. One of the missing ingredients is the training/resources, model documents, and example supporting diligence practices that institutional investors expect from experienced fund managers. Creating a resource for these materials could accelerate the availability of quality investment fund managers.

Years ago, there was a call out from the professional venture capitalists and the seasoned entrepreneurs they engaged with to find a way to standardize the legal documents required in a venture investment. Before this time, termsheets could be different formats from one investor to another, making reconciliation and comparison across multiple investors difficult for entrepreneurs to manage - thereby reducing efficiency and the rate of success. Several members of the legal teams for prominent venture capital firms got together and helped create a standard set of documents, available at www.nvca.org, which has ever since been the accepted model documents used in nearly all venture capital transactions.

Similarly, aspiring investment fund managers are often held back by the lack of a standardized framework for the documents expected by an institutional investor engaging in diligence evaluation. What is needed is a public resource for model documents for an investment fund manager. This library could include: Private Placement Memorandum, Due Diligence Questionnaire, Standard Operating Document Templates, Valuation Report Templates, Limited/ General Partnership Agreements, and Investment Proposal Templates among other samples of investment fund supporting documents. As with venture investments, a qualified attorney is still an invaluable part of the document drafting process, but these model documents will embolden prospective investment fund general partners as to the expectations of their potential limited partners and the investment consultants who serve them.

More education and mentorship resources are needed to accelerate the business funding ladder learning rate and support infrastructure.

o more to develop, fund, and encourage the creation of education and mentorship resources in clusters around the region. Grouped either by regional affiliation and/or by business sector, entrepreneurs would benefit from access to more experienced business leaders and investors. The readers of this report should seek to build the community network of experienced mentors around entrepreneurial people. Part of this effort is creating forums for the purveyors of different forms of capital to educate aspiring business builders as to the customs, expectations and norms related to their capital type would help lower the understanding barrier that prevents or impedes new business formation and growth. This training could be delivered through curriculum within high-schools, summer programs, universities, community colleges, or through the many accelerators, incubators, and Angel investment groups as well as through independent entrepreneurial associations like Oregon Entrepreneurs Network (OEN) and The Indus Entrepreneurs (TiE). What is crucial is to educate on more than just the first rounds of capital. To quote Stephen Covey, the renowned leadership trainer, these entrepreneurs must "begin with the end in mind". That is, they must understand the full ladder and what constitutes a fundable profile at each stage of development. Not to say that they have

to be able to predict their future, but even when pivoting their business plan, an entrepreneur needs to understand what the next fundable stage looks like. Collaboration between various accelerators, incubators, mentors, fellow entrepreneurs, and support organizations is critical.

"Begin with the end in mind."

Tax incentives to encourage angel / seed investing.

ow to incentivize more people to wisely invest in the early stages of company development is especially challenging in those areas outside the core urban centers of each state. Outside of Portland and Seattle, most of the Pacific Northwest has a dearth of the kind of experienced and highly active angel investors that make for a vibrant ecosystem for raising capital. There may be creative strategies to foster reinvestment by Angels into emerging growth companies - and the concurrent engagement of those previously successful business leaders with the mentoring of new management teams. For example, allowing qualified Angel investors (as defined by SEC regulations) to immediately write down to zero the carrying value of their Angel investment for state tax liability purposes. This action would give Angels a path to proactively time tax deductions, by making investments, while retaining the full tax-liability for all gains that may result from future liquidity events (and therefor state revenues). Effectively, allowing individuals to immediately control the timing of Angel investment loses while maintaining fully liability for recognizing taxable Angel investment gains in the year they occur. With this type of program in place, States may well see a surge of Angel investments being made before each tax year deadline.

We would recommend a group of interested policy makers convene to discuss this and other ways to incentivize those with accumulated wealth to reinvest both their experience and their money into the next generation of emerging businessess.

Foundations should seek to accelerate implementation of mission-related investing activities.

ission-related investing (MRI) paradigms can be effective ways to channel the significant resources of regional foundations, endowments and pensions to further advance regional economic prosperity through business formation and growth. Currently, only a minority of foundations have engaged in this new paradigm, in part, because it requires the addition of a new set of skills and professional resources to properly engage in this activity. Some of the Pacific Northwest's largest foundations have been early adopters of this new paradigm and we recommend that those leaders continue to expand their allocation to MRI consistent with entrepreneurial business growth. Further, it is hoped that they continue to expand their charitable grant allocation to those organizations state-wide that foster and educate entrepreneurship at all levels. It is worth noting that many of the great fortunes that are the source of our State's foundations and endowments came from entrepreneurs and those who dared to grow new businesses in the region. It seems right and aligned that these same organizations should embrace the investment into creating similar success while furthering their own prosperity.

PACIFIC DETAILED CAPITAL FLOWS DATA

FRAMEWORK

his report is based on a variety of datasets, both public and private. Where published quantitative data was not readily available, the research team performed qualitative interviews and attempted to assemble presentation information that would provide a picture of the scale of capital available – though these results may not represent all of the capital available in a particular segment. Readers may need to extrapolate for themselves what the full picture may look like based on representative subsets. Private company transaction data is inherently incomplete at times and not all transactions can be captured. For example, family loans for bootstrapped companies would fall outside our data gathering sources. As well, we sourced venture capital investment activity from multiple sources, some of which are public and others private subscription databases and find their totals to be generally in agreement on scale, though not precisely matching. Each data source provides a useful perspective and has been included where possible for that reason. Further, the time period covered by this report is 2013 and 2014. Transactions that fall outside that window, or very nearly to the edges of that window in common memory, may not be included unless reported within the specific calendar dates of study. Our prior experience also shows that individual memories of specific transactions generally arise when this collective dataset is presented. We do not have perfect visibility into the matching of each company name with a transaction. Our data providers, at time, kept some details of transactions private. Therefore, this data should be used to identify general and relative trends versus the tracking of any individual transaction. Data sources are referenced with each section and table. Where there were multiple data sets that reported on a domain, or only partial data sets, we report them together and call attention to the point.

Groupings of emerging / growth capital sources covered

This report will address the following segments:

16	Accelerators and Incubators
26	Commercialization Grant Programs (SBIR, STTR)
29	Crowdfunding
36	Seed, Angel, and Angel Conference Funding
45	Economic Development Districts & Micro-Loans
52	Community Development Financial Institutions (CDFI)
54	USDA Rural Loan Programs
62	New Markets Tax Credits
63	Venture Capital
72	Small Business Administration (SBA) Loans
74	Private Equity, M&A, and IPO Activity
75	Grantmaking Foundations and Mission-Related Investing

These sources are not an exhaustive list of sources and flows of emerging growth and growth capital in the region, but will present a fair representation of the breadth of sources and, we hope, provide entrepreneurs, business owners, community leaders, and policymakers with a greater awareness of the scope and scale of capital in the region. What cannot be captured in this report is an accounting of self-funded or "friends-and-family" funded enterprises, though it is believed that they account for a significant share of small business formation in the Pacific Northwest.

FINDINGS

In the following sections of this report we present primarily quantitative assessments of the flows of various forms of capital in the region during the 2013-2014 calendar year time period – the time period that extends beyond where the previous reports ended and current enough to be informative, but historical enough to allow for the accumulation and comparison of data across all capital types. Where data stretching back further or more recent anecdotal information adds perspective to the conclusions we include that additional data.

Accelerators & Incubators

n area of rapid expansion in the Pacific Northwest over the past 5 years, and a significant change since the last Oregon Capital Scan report, has been the broad field of new business Accelerators, Incubators, Co-working Spaces, SBDCs and other resources available to the earliest stages of company development. While opinions on what qualities differentiate an accelerator from an incubator vary, most would agree that an incubator is generally focused on an earlier stage of company development needs versus an accelerator, whose purpose, like its name implies, is to add mentorship, collaboration, and other resources in order to speed up the development timeline of an emerging company. Often that acceleration can be as much toward the furthering of the growth of the business as it can be toward determining that the idea does not have sufficient merit to continue and its founders should wind down the effort in favor of a new concept. Often the terms are interchangeable and an "accelerator" or "incubator" may refer to any number of early company growth service organizations.

Small Business Development Centers (SBDCs) provide services through professional business advisors such as: development of business plans; manufacturing assistance; financial packaging and lending assistance; exporting and importing support; disaster recovery assistance; procurement and contracting aid; market research services; aid to 8(a) firms in all stages; and healthcare information. SBDCs serve all populations, including: minorities; women; veterans, including reservists, active duty, disabled personnel, and those returning from deployment; personnel with disabilities; youth and encore entrepreneurs; as well as individuals in low and moderate income urban and rural areas.

Co-working spaces are a style of work space environment that involves a shared, semi-communal working environment, yet with independent company activities. Unlike the typical office environment, a co-working space is generally shared by individuals from different organizations and professions. The benefits of this style

of work space are many as the shared knowledge of the community can be easily accessed by any individual company or tenant which can help accelerate knowledge sharing.

Capital resources available to companies in accelerators and incubators can typically take the form of in-kind capital resources and occasionally equity or loans. Reduced rents, volunteer mentorship, pro-bono service provider offerings, business strategy consulting, and marketing assistance are common though not ubiquitous. In emerging growth companies, it can be said that "time is money" and the assistance provided by the accelerators and incubators can translate to a lower capital cost to launch an enterprise.

While cash investment is less frequent, we view accelerators and incubators as a frequent on-ramp point for start-up companies into the capital ecosystem. Many Angel groups and seed funds are intertwined with accelerators and incubators in Oregon and, therefore, a reporting of the various entities is an integrated part of any capital ecosystem accounting.

Our summary of accelerators and incubators in the Pacific Northwest is primarily qualitative as quantitative measures of the in-kind capital contributed would often be a subjective assessment. Still, there is much value to entrepreneurs, early-stage investors, educators, and policy makers to understand the variety of the offerings and the rapid growth of these services in the Pacific Northwest.

Commercialization Grant Programs

Small Business Innovation Research (SBIR) & Small Business Technology Transfer (STTR)

t the earliest phases of the commercialization pipeline are the SBIR/STTR grants from various funding entities within the US Federal Government. These two programs represent a substantial funding source for the entrepreneur working on commercializing technologies of interest to various governmental agencies.

The SBIR program is a highly competitive program that encourages domestic small businesses to engage in Federal Research/Research and Development (R/R&D) that has the potential for commercialization. Through a competitive awards-based program, SBIR enables small businesses to explore their technological potential and provides the incentive to profit from its commercialization. By including qualified small businesses in the nation's R&D arena, high-tech innovation is stimulated and the United States gains entrepreneurial spirit as it meets its specific research and development needs4.

STTR is another program that expands funding opportunities in the federal innovation research and development (R&D) arena. Central to the program is expansion of the public/private sector partnership to include the joint venture opportunities for small businesses and nonprofit research institutions. The unique feature of the STTR program is the requirement for the small business to formally collaborate with a research institution in Phase I and Phase II. STTR's most important role is to bridge the gap between performance of basic science and commercialization of resulting innovations5.

Both the SBIR and STTR programs are divided into three phases, the first two of which are sources of funding to help bring innovations forward from the lab to commercialization. The phases are:

Phase I: Feasibility and Proof of Concept. The objective of Phase I is to establish the technical merit, feasibility, and commercial potential of the proposed R/R&D efforts and to determine the quality of performance of the small business awardee organization prior to providing further federal support in Phase II. Phase I awards normally do not exceed \$150,000 total costs for 6 months (SBIR) or 1 year (STTR).

Phase II: Research/Research and Development. The objective of Phase II is to continue the R/R&D efforts initiated in Phase I. Funding is based on the results achieved in Phase I and the scientific and technical merit and commercial potential of the project proposed in Phase II. Only Phase I awardees are eligible for a Phase II award. SBIR/STTR Phase II awards normally do not exceed \$1,000,000 total costs for 2 years.

Phase III: Commercialization. The objective of Phase III, where appropriate, is for the small business to pursue commercialization objectives resulting from the Phase I/II R/R&D activities. The NIH SBIR/STTR programs do not fund Phase III, and NIH does not generally provide any Phase III funding to small businesses, thus it is not captured in the data⁶.

The following tables show SBIR and STTR funding in the states of interest to this report. The California data in these tables represents all of the state and is not limited to the Northern California counties targeted by this report.

Table 2: 2013 SBIR Grants Awarded by State and by Phase⁷

State	Number of Phase I	Phase I Dollars	Number of Phase II	Phase II Dollars	Total Awards	Total Dollars
Alaska	2	\$246,965	0	\$0	2	\$246,965
California	638	\$111,665,890	328	\$293,975,963	966	\$405,641,852
Idaho	3	\$449,977	3	\$1,948,014	6	\$2,397,991
Montana	21	\$2,757,866	6	\$2,732,845	27	\$5,490,711
Oregon	41	\$7,188,100	16	\$15,691,418	57	\$22,879,518
Washington	60	\$10,722,623	25	\$25,563,125	85	\$36,285,748
Wyoming	1	\$599,241	1	\$489,460	2	\$1,088,701

Table 3: 2014 SBIR Grants Awarded by State and by Phase8

State	Number of Phase I	Phase I Dollars	Number of Phase II	Phase II Dollars	Total Awards	Total Dollars
Alaska	1	\$150,000	2	\$1,197,833	3	\$1,347,833
California	734	\$123,413,590	337	\$300,562,993	1071	\$423,976,582
Idaho	5	\$622,250	2	\$999,969	7	\$1,622,219
Montana	16	\$2,154,397	8	\$6,878,476	24	\$9,032,873

Crowdfunding

o form of new capital for emerging companies has been more impactful in the past five years than crowdfunding. Crowdfunding, which can take a variety of structural forms recently accounted for an estimated \$16B of capital raised globally in 2014. Further, crowdfunding is expected to surpass the VC industry in 2015 in total capital invested per year at approximately \$34B. The global VC industry, in comparison, totals approximately \$30B per year. The US accounted for 532 thousand of the 1187 thousand worldwide campaigns tracked from over 190 different crowd funding platforms (CFPs) in 2011. Worldwide, there are an estimated 536 CFPs. The categories of capital available through this channel include 4 primary formats: (1) Equity-based; (2) Lending-based; (3) Reward-based; and (4) Donation-based.

Table 6: Kickstarter Summary¹⁰

2013				
State/Region	# of Projects Funded	Total Funding \$	Average Project \$	Median Project \$
Alaska	50	\$712,558	\$14,251	\$5,325

Crowdfunding presents a new avenue for entrepreneurs and other creative people to seek funding in a non-traditional way. This report uses Kickstarter as a proxy for the industry as data is not generally made public by each crowdfunding platform. Industry estimates indicate that Kickstarter accounted for approximately 6% of the worldwide crowdfunding market in 201111. We believe Kickstarter's share of the Pacific Northwest market is higher than their worldwide share. We estimate that Kickstarter's share of the Pacific Northwest market exceeds 25% so a reasonable estimate of the total crowdfunding activity in the Pacific Northwest may exceed 4 times the detailed figures reported here. A summary of Kickstarter activity for 2013 & 2014 is shown in Table 6. A summary of Kickstarter activity by State/Province and by City for the full year 2014 is shown in Table 7. All data was sourced though publicly accessible sources within Kickstarter.com.

Economic Development District Micro-Loan Programs

conomic Development Districts work to provide effective, efficient delivery of economic development services benefiting healthy and sustainable communities and businesses. Operating regionally, they forge strategies, solutions, and partnerships that achieve clear, quantifiable and tangible results, most of which would not have been feasible for a single local jurisdiction to implement. Economic Development Districts manage and deliver an abundance of federal and state programs based on local needs and priorities. The Federal government, through its US Economic Development Administration oversees a variety of programs that support regional development. These programs include¹³:

- Public Works: Empowers distressed communities to revitalize, expand, and upgrade their physical infrastructure to attract new industry, encourage business expansion, diversify local economies, and generate or retain long-term, private sector jobs and investment.
- Economic Adjustment: Assists state and local interests in designing and implementing strategies to adjust or bring about change to an economy. The program focuses on areas that have experienced or are under threat of serious structural damage to the underlying economic base. Under Economic Adjustment, EDA administers its Revolving Loan Fund (RLF) Program, which supplies small businesses and entrepreneurs with the gap financing needed to start or expand their business.
- Partnership Planning: Supports local organizations (Economic Development Districts, Indian Tribes, and other eligible areas) with long-term planning efforts. The Comprehensive Economic Development Strategy (CEDS) Content Guidelines, provides suggestions, tools, and resources for developing comprehensive economic development strategies.

Pacific Northwest Capital Scan 36

- Trade Adjustment Assistance for Firms: A national network of 11 Trade Adjustment Assistance Centers to help strengthen the competitiveness of American companies that have lost domestic sales and employment because of increased imports of similar goods and services.
- University Centers: A partnership of the federal government and academia that makes the varied and vast resources of universities available to the economic development community.
- Research and National Technical Assistance: Supports research of leading edge, world class economic development practices and information dissemination efforts.
- Local Technical Assistance: Helps fill the knowledge and information gaps that may prevent leaders in the public and nonprofit sectors in distressed areas from making optimal decisions on local economic development issues.

Community Development Financial Institutions

ommunity development financial institutions (CDFIs) are private financial institutions that are 100% dedicated to delivering responsible, affordable lending to help low-income, low-wealth, and other disadvantaged people and communities join the economic mainstream. By financing community businesses—including small businesses, microenterprises, nonprofit organizations, commercial real estate, and affordable housing—CDFIs spark job growth and retention in hard-to serve markets across the nation. CDFIs are profitable but not profit-maximizing. They put community first, not the shareholder. For more than 30 years, they have had a proven track record of making an impact in those areas of America that need it most¹⁴. As with mainstream lenders, a variety of institutions has emerged to serve the broad range of needs in emerging domestic markets. Although they share a common vision of expanding economic opportunity and improving the quality of life for low-income people and communities, the four CDFI sectors—banks, credit unions, loan funds, and venture capital (VC) funds—are characterized by different business models and legal structures:

Community development banks provide capital to rebuild economically distressed communities through targeted lending and investing. They are for-profit corporations with community representation on their boards of directors. Depending on their individual charter, such banks are regulated by some combination of the Federal Deposit Insurance Corporation (FDIC), the Federal Reserve, the Office of the Comptroller of the Currency, the Office of Thrift Supervision, and state banking agencies. Their deposits are insured by FDIC15.

Community development credit unions (CDCUs) promote ownership of assets and savings and provide affordable credit and retail financial services to low-income people, often with special outreach to minority communities. They are nonprofit financial cooperatives owned by their members. Credit unions are regulated by

the National Credit Union Administration (NCUA), an independent federal agency, by state agencies, or both. In most institutions, deposits are also insured by NCUA¹⁶.

Community development loan funds (CDLFs) provide financing and development services to businesses, organizations, and individuals in low-income communities. There are four main types of loan funds: microenterprise, small business, housing, and community service organizations. Each is defined by the client served, though many loan funds serve more than one type of client in a single institution. CDLFs tend to be nonprofit and governed by boards of directors with community representation¹⁷.

Community development venture capital (CDVC) funds provide equity and debt-with-equity-features for small and medium-sized businesses in distressed communities. They can be either for-profit or nonprofit and include community representation¹⁸.

A significant source of public capital for CDFIs is the US government. The US Department of the Treasury operates a Community Development Financial Institutions Fund which aims to empower America's financially distressed communities. The CDFI Fund achieves its purpose by promoting access to capital and local economic growth in the following ways19:

- through its Community Development Financial Institutions Program by directly invest ing in, supporting and training CDFIs that provide loans, investments, financial services and technical assistance to underserved populations and communities;
- through its New Markets Tax Credit (NMTC) Program by providing an allocation of tax credits to Community Development Entities which enable them to attract investment from the private-sector and reinvest these amounts in low-income communities;
- through its Bank Enterprise Award (BEA) Program by providing an incentive to banks to invest in their communities and in other CDFIs; and
- through its Native Initiatives, by taking action to provide financial assistance, technical assistance, and training to Native CDFIs and other Native entities proposing to become or create Native CDFIs.
- through its CDFI Bond Guarantee Program by issuing bonds to support CDFIs that make investments for eligible community or economic development purposes.

New Markets Tax Credit Program

he New Markets Tax Credit (NMTC) Program, enacted by Congress as part of the Community Renewal Tax Relief Act of 2000, is incorporated as section 45D of the Internal Revenue Code. This Code section permits individual and corporate taxpayers to receive a credit against federal income taxes for making Qualified Equity Investments (QEIs) in qualified community development entities (CDEs). These investments are expected to result in the creation of jobs and material improvement in the lives of residents of low-income communities. Examples of expected projects include financing small businesses, improving community facilities such as daycare centers, and increasing home ownership opportunities. A "low-income community" is defined as any population census tract where the poverty rate for such tract is at least 20% or in the case of a tract not located within a metropolitan area, median family income for such tract does not exceed 80 of statewide median family income, or in the case of a tract located within a metropolitan area, the median family income for such tract does not exceed 80% of the greater of statewide median family income or the metropolitan area median family income. As part of the American Jobs Creation Act of 2004, IRC §45D(e)(2) was amended to provide that targeted populations may be treated as low-income communities. A "targeted population" means individuals, or an identifiable group of individuals, including an Indian tribe, who are low-income persons or otherwise lack adequate access to loans or equity investments20.

USDA Rural Development Funding

hrough its Business Programs, USDA Rural Development provides for business credit needs in under-served rural areas, often in partnership with private-sector lenders. The various loan and grant programs that are available to help with funding in rural regions across the Pacific Northwest. As an example, the Business and Industry Guaranteed Loan program (B&I) has as its purpose to improve, develop, or finance business, industry, and employment and improve the economic and environmental climate in rural communities. This purpose is achieved by bolstering the existing private credit structure through the guarantee of quality loans which will provide lasting community benefits. It is not intended that the guarantee authority will be used for marginal or substandard loans or for relief of lenders having such loans. The USDA Rural Development programs report the following activity for the funding years 2013–2014 by state included in the Pacific Northwest:

Table 11: USDA Rural Development Funding Programs

Seed Funding and Angel Investment

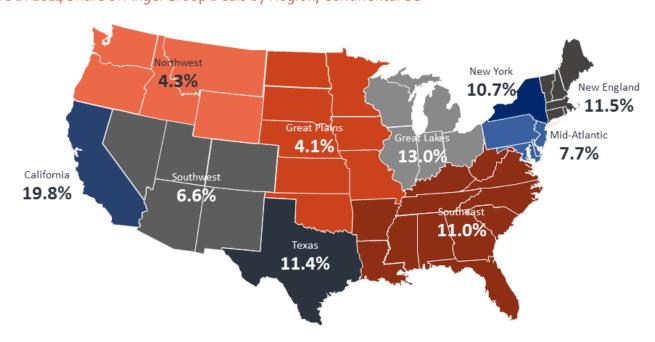

ationally, the Seed and Angel investment ecosystem is healthy and stable with median investment round size continuing to increase from \$600K in 2013 to \$800K in 201422. The Pacific Northwest accounted for 4.3% of the deals and 3.6% of the dollars invested by Angels nationally in 2014 according to the Angel Resource Institute. More recent data from the same report in 2015 has these numbers on the rise. The Angel Capital Association (ACA) reports 170 Angel Capital member organizations across the US with over 8000 accredited individual member investors as members. The ACA counts over 265,000 individuals who have made Angel investments in the US. Individual angel investors are required to be accredited investors by the SEC's definitions²³. Of the approximately 8.6 million millionaires in the US, roughly 3% engages in angel investments24. A detailed table of angel and seed investments by City and State within the research region can be found in Table 16.

Table 12: Angel & Seed Transactions Summary 25

Angel Deals in Pacific Northwest								
Number of Deals Funded Total Funding Average Deal (\$M)								
339	\$587,000							
Seed Deals in Pacific Northwest

Venture Capital

he area of growth company capital formation whose name is most familiar is the venture capital segment. Generally this category is comprised of professional investment partnerships which make investments in private high-growth potential companies. Data for transactions falling under the VC category are available from a number of sources; however we found agreement on numerical totals to be inexact. We represent below the data from three sources: Thomson Reuters via PricewaterhouseCoopers MoneyTree™, CB Insights, and Pitchbook Data, Inc. While totals vary somewhat, they are consistent within a range that is instructive for those attempting to understand the scale of capital flowing through this channel into Pacific Northwest based companies.

Note: "National" invesment fund managers listed are located in the Pacific Northwest and will likely invest significant capital in the region. Their investment strategy, however, is not geographically constrained to the region.

Small Business Administration (SBA) Loans

he U.S. Small Business Administration (SBA) was created in 1953 as an independent agency of the federal government to aid, counsel, assist and protect the interests of small business concerns, to preserve free competitive enterprise and to maintain and strengthen the overall economy of our nation. The SBA helps Americans start, build and grow businesses. Through an extensive network of field offices and partnerships with public and private organizations, SBA delivers its services to people throughout the United States, Puerto Rico, the U. S. Virgin Islands and Guam²⁹.

How does the SBA guarantee loan program work?

Under the quaranty concept, commercial lenders make and administer the loans. The business applies to a lender for their financing. The lender decides if they will make the loan internally or if the application has some weaknesses which, in their opinion, will require an SBA quaranty if the loan is to be made. The quaranty which SBA provides is only available to the lender. It assures the lender that in the event the borrower does not repay their obligation and a payment default occurs, the Government will reimburse the lender for its loss, up to the percentage of SBA's guaranty. Under this program, the borrower remains obligated for the full amount due. SBA acts like an insurance agency and provides a guarantee to the bank. Since this is a bank loan, applications must be submitted to the bank and monthly loan payments are paid to the bank. The bank is also responsible for closing the loan and disbursing the loan proceeds. SBA's involvement is limited to reviewing the loan application submitted by the bank to assure they meet eligibility and credit standards. SBA provides the bank with a written Authorization outlining the conditions of the SBA guarantee³⁰.

The SBA maintains District Offices which track SBA-backed loans. The SBA has several types of loans available, the most popular being categorized under the 7(a) (general small business loans) program and 504 (real estate and equipment loans) program. Within the 7(a) program there exist a number of sub-types with differing loan parameters and requirements. These include Standard 7(a), SBA Express, Patriot Express, CAPLines, International Trade, Exporting Working Capital Program, Small Loan Advantage, and Community Advantage. A more detailed description of these loan programs can be found in the appendix. SBA also has a microloan program. For this report, we focus on summary 7(a) and 504 loan data.

Private Equity, Mergers & Acquisitions, And Initial Public Offerings

rivate equity is equity capital for businesses that is not quoted on a public exchange. Similarly, Mergers and Acquisitions (M&A) often occur between companies where a sales price is not disclosed. Private equity consists of investors and funds that make investments directly into private companies or conduct buyouts of public companies that result in a delisting of public equity. Capital for private equity is raised from retail and institutional investors, and can be used to fund new technologies, expand working capital within an owned company, make acquisitions, or to strengthen a balance sheet. The majority of private equity consists of institutional investors and accredited investors who can commit large sums of money for long periods of time. Private equity investments often demand long holding periods to allow for a turnaround of a distressed company or a liquidity event such as an Initial Public Offering (IPO) or sale to a public company.

The following data tables represent transaction activity in the Pacific Northwest during the study period of this report. Buyout/Leveraged Buyout (LBO) refers to buyouts of a company where debt is often used by a private firm or by employees and management of a company to transfer the ownership of the company to new owners. A corporate asset purchase is a similar transaction with potentially different, non-debt, funding sources. An IPO is an initial public offering of equity; what is typically seen as "going public" on a stock exchange. Private equity Growth/Expansion transactions are typically executed by private financing firms and partnerships using institutional capital to make large scale financing investments in growth companies. The differences between late state venture capital and private equity growth capital can overlap. A PIPE is a private investment in public equity and represents a situation where a private equity firm takes a significant stake in a publicly traded stock security.

Grantmaking Foundations

hilanthropic foundations in the Pacific Northwest provide a substantial amount of grant capital, generally to non-profit entities within the region. While this capital has a different purpose and form than other commercial growth capital funding sources, it does provide capital which helps build organizations with full time employed staff. These are a form of business that may be of interest to social and impact entrepreneurs and policymakers who are seeking to build or support the building of regional organizations with local economic impact. We include this capital source for this reason as it contributes to economic development and supports employment within a number of entities. This report does not attempt to separate grants or donations by region.

A smaller segment of Foundation and Endowment investing activity comes in the form of what is called mission-related investing (MRI) and program related investing (PRI). The simplest way to distinguish between the two forms is that PRI is typically positioned as a charitable, below market rate of return, form of investing and is often treated similarly to charitable grants for tax purposes. MRI, on the other hand, can be any investment made in which the investing entity intends to create both a social good that is consistent with the Foundation's stated mission as well as a market rate economic return. In the case of MRI's, the goal of the investment is more than just financial profit.

For those looking to build a business that might appeal to MRI/PRI investor interest, both MRI and PRI may be accessible depending on the type of company being built. One of the major differences will be the cost of capital and return expectations demanded by the Foundation investor. Those seeking this form of capital should also understand that most MRI/PRI programs account for a very small proportion of a Foundation's total assets and are often managed by a dedicated professional who may or may not work in the same department as those who manage the overall investment portfolio of the Foundation. Often, Foundations will effectively outsource their MRI/PRI investments by choosing to invest in strategically aligned funds versus making direct company investments. Mission related investing may still be in the early phases of its adoption across the Foundation landscape, but its use is expanding. The Foundation Center published a report in 2011 that indicated that larger foundations with annual giving rates in excess of \$10 million are leading the adoption.

Figure D: Mission Investments by Year.

Most foundations list the areas of grant interest and MRI/PRI interest in alignment with their stated missions directly on their website. They also file reports with the Internal Revenue Service which frequently detail their grants awarded by recipient institution. Those seeking to match their project needs with the appropriate foundation are well served to research a foundation's prior grant and reported investment history in order to assess first order scale and fit alignment. The Mission Investor's Exchange maintains a database of foundation MRI investing nationally. Since 2010, they have recorded 620 investments totaling over \$1,327,043,222 31.

The question of institutional barriers to mission-aligned investing was outlined in an article for the Stanford Social Innovation Review 12. Potential barriers to mission alignment include 32:

- **Delegation of investment authority**: Most institutions (and individuals) use fund managers because it is economically efficient to do so. Gaining an understanding of a foundation's holdings through these managers can be difficult as it may raise costs and their investments are constantly shifting.
- Fund structure: Many institutional investors use investment vehicles that are time-bound and have liquidity constraints. Some private equity funds also lack transparency around the companies they acquire, which can lead to unpleasant surprises.
- Lack of standardized data: While the amount of data available to investors to assess an investment's sustainability performance is increasing, there is a lack of standardized data. This can make it difficult to compare companies' sustainability performance across different industries so that investors remain mission-aligned. The emergence of managers and advisors that monitor investments using publicly available and proprietary data can assist foundations to appropriately and effectively address these barriers.

Another constraint for foundations looking at MRI is the question of fiduciary responsibility and questions related to whether mission impact can be considered part of an overall return maximization investing strategy. In September 2015, the US Internal Revenue Service (IRS) released "Notice 2015- 62: Investments Made for Charitable Purposes," which explicitly enables foundations to consider mission when undertaking investment. The relevant section states that: When exercising ordinary business care and prudence in deciding whether to make an investment, foundation managers may consider all relevant facts and circumstances, including the relationship between a particular investment and the foundation's charitable purposes. Foundation managers are not required to select only investments that offer the highest rates of return, the lowest risks, or the greatest liquidity so long as the foundation managers exercise the requisite ordinary business care and prudence under the facts and circumstances prevailing at the time of the investment in making investment decisions that support, and do not jeopardize, the furtherance of the private foundation's charitable purposes.

APPENDIX

Definitions / Glossary

Accelerators & Incubators offer a variety of in-kind services that can offset traditional capital requirements through discounted or free support services, rent, mentorship, training and staffing. Differentiating between accelerators and incubators may often be subjective, but typically incubators are considered extremely early stage support and accelerators are a next phase of developmental support.

Angel investors are often associated with seed or early stage investing, but in fact, angels may invest any type of capital at any stage. Angels are commonly wealthy individuals who choose to invest capital in new enterprises. There is a wide range of angel investors. They can vary in the stage and sectors of business in which they invest and also in the frequency and scale of the investments they make. Another difference among angels is their degree of involvement. Some angels serve on company boards where they can add significant expertise. Others don't have the time or specific sector experience to contribute.

Asset-based lending is higher risk than traditional bank lending and has commensurately higher rates of return. This lending can include non-traditional forms of collateral, such as accounts receivable (payments owed to a business by its customers). This type of lending has historically proliferated when capital is tight and businesses have weaker balance sheets.

Bootstrapping/Internal Funding/Profit Reinvestment is the most fundamental tool for business funding available. The primary principle of 'picking yourself up by the bootstraps' and building a business based on the profit available from operations is as old as commerce itself. Most companies have at least some level of this type of funding in their history. Many companies may exist for years with only this type of internally sourced funding, while others use this stage of development as a foundation for later gathering of larger amounts of capital. This type of funding is very difficult to track as it is not typically reported to any agency or data aggregator. However, one can assume that if an entity seeks any of the other types of capital covered within this report, there is some level of Bootstrapping or Internal/Founder funding in place. There is no special requirement to be attractive to this type of financing other than to be ready to take on the personal risks of starting a company and having personal or close family capital in sufficient quantity, and perhaps, the personal charisma to convince yourself, your friends, and family that you are less of a risk than you most likely are.

Buyout capital traditionally uses a small amount of equity, leveraged with a relatively large amount of debt to acquire control of a company. Because little equity is employed, the repayment of debt is relatively risky and consequently the debt carries a high interest rate. Buyout investment groups target mature businesses that have strong balance sheets and stable cash flows to service the debt required by this investment strategy.

Community Development Financial Institutions (CDFIs) are a Federally backed program empowering individual CDFI organizations. The purpose of the CDFI Program is to use federal resources to invest in CDFIs and to build their capacity to serve low-income people and communities that lack access to affordable financial products and services. Through the CDFI Program, the CDFI Fund provides two types of monetary awards to

CDFIs - Financial Assistance awards and Technical Assistance awards. CDFIs may use the funds to pursue a variety of goals, including: To promote economic development, to develop businesses, to create jobs, and to develop commercial real estate; to develop affordable housing and to promote homeownership; and to provide community development financial services, such as basic banking services, financial literacy programs, and alternatives to predatory lending. Since 1994, the CDFI Fund has awarded more than \$1.3 billion in FA and TA awards through the CDFI Program³⁴.

Commercialization grants may be available from both Federal and State government sources as well as Foundations and Endowments depending on their mission. Most common of the Federal programs include SBIR/ STTR grants. State grants in Oregon include those from Signature Research Centers like ONAMI, OTRADI and OregonBEST.

Convertible debt notes are a form of debt that pay interest, but can be converted into equity based on a predetermined set of trigger events. The benefit is that the setting of a price or value of the company can be postponed until a later, typically more institutional financing event occurs. These notes are often used in seed, Angel and early stage venture investing.

Crowdfunding is an emergent category of funding through large pools of individuals can take the form of donations, equity, rewards, or loans. Crowd funding platforms (CFP) are internet based forums for raising capital.

Early stage venture capital (VC) is usually the first formal or institutional round of financing a start-up receives and is often referred to as a series A. Lettered names for investment rounds generally follow the A, B, C, D, and so on, convention. Rounds A and B may be considered earlier stage while C, D, or later rounds would generally be considered later stage. Some businesses may have already gone to market, selling to early customers by the time a series A round closes. The venture capital model relies on a strict set of criteria for success: a defensible advantage; a large market in which to scale rapidly; low capital costs; and a strong management team, which includes experience with successful start-ups, domain expertise and a competitive drive to win. VC firms tend to have specific industry domain and stage of development preferences and expertise.

Economic Development Districts work to provide effective, efficient delivery of economic development services benefiting healthy and sustainable communities and businesses. Operating regionally, they forge strategies, solutions, and partnerships that achieve clear, quantifiable and tangible results, most of which would not have been feasible for a single local jurisdiction to implement. Economic Development Districts manage and deliver an abundance of federal and state programs based on local needs and priorities. The Federal government, through its US Economic Development Administration oversees a variety of programs that support regional development.

Initial Public Offering (IPO) has traditionally been the ultimate goal of a venture capital funded company. While the regulatory hurdles to achieving an IPO are significant, companies can access public markets in a variety of ways. This type of funding is typically accessed following significant previous rounds of venture capital investment.

Later stage venture capital (VC) is follow-on financing for businesses that have already received some venture capital investment. This capital is used to scale businesses before a liquidity event such as a private sale or initial public offering (IPO).

Mergers and Acquisitions (M&A) represents both a funding source for growth and an opportunity for entrepreneurs and investors to gain liquidity. The sale of a company whole or in part to another business is generally a positive event. The scale of M&A activity ranges from small deals between local companies to global transactions between huge corporations. Frequently a specialty M&A investment bank firm is hired to assist in the search and match-making function of an M&A transaction or is brought in to help negotiate an unsolicited bid. Selection of knowledgeable partners is often a key component of a satisfying transaction.

Mezzanine capital is invested as preferred equity or debt with high interest rates accompanied by warrants. This capital is often used to finance growth businesses, but can be used in a variety of situations including business turnarounds. Mezzanine lending is unsecured, meaning that it has no claims on assets, contributing to the higher interest rates for this type of debt.

Microloans are small loans to borrowers who do not qualify for traditional bank loans. In the U.S., these loans range from \$100 to \$50,000. Borrowers typically lack collateral, credit history or steady employment. Lenders often require business counseling as a condition of the lending process. This lending counseling/assistance is a critical risk management tool. These loans can play an important role for micro entrepreneurs who have few other options for financing.

Mission-Related Investing (MRI) includes any investment made in which the investing entity intends to create a social or environmental that is consistent with a stated philanthropic mission alongside a market rate financial return.

New Markets Tax Credits The New Markets Tax Credit Program (NMTC Program) was established by Congress in 2000 to spur new or increased investments into operating businesses and real estate projects located in low-income communities. The NMTC Program attracts investment capital to low-income communities by permitting individual and corporate investors to receive a tax credit against their Federal income tax return in exchange for making equity investments in specialized financial institutions called Community Development Entities (CDEs). The credit totals 39 percent of the original investment amount and is claimed over a period of seven years (five percent for each of the first three years, and six percent for each of the remaining four years) 35.

Private equity (PE) funds, like VC funds, are often organized as limited partnerships (LP). This legal structure creates a fiduciary duty for general partners (the investment managers) to act in the best interest of the limited partners (the investors). Private equity is a broad category of private investment funds, which include: venture capital; growth capital; and leveraged buyout funds. These funds are differentiated by their specialized investment strategy. PE funds are typically associated with later stage and larger scale financings versus venture capital funds, though both are considered a form of private equity.

Revenue loans have a current pay obligation similar to the interest rate on a conventional loan, but the current pay obligation on a revenue loan is a percentage of revenue up to a total return, usually 2-3x the original investment. This structure allows a revenue loan to share in the upside of growth through rapid repayment, but doesn't provide quite the burden that conventional debt does when a firm's revenues decline and money is tight.

Seed stage capital can take the form of equity, but most often is used as convertible debt notes to finance start-ups as they move from concept to prototype or product, prior to being ready to sell their products in the market.

Small Business Administration 7(a) and 504 guaranteed loans are available from a number of participating banks and differ from traditional loans in that they are guaranteed by the Federal government. These loans may allow banks to take on somewhat more risky small business financings than would otherwise be acceptable.

Strategic investors are companies which invest in businesses that have strategic value to the investor. Strategic investors may deploy their capital at various stages and for various reasons, such as growth through acquisition or access to new technologies ahead of competitors.

Traditional bank loans are made to individuals and businesses, based on a set of standards that rely on assets for collateral, such as a building, and a future cash flow to service the debt. Because bank lending is secured, bank rates are considerably lower than mezzanine debt.

USDA Rural Development provides grants, micro-loans and loan guarantees as well as job training and business development opportunities for rural residents, including cooperative business development, community economic development and strategic community planning and faith-based and self-help initiatives. "Rural" is defined as any metropolitan area with fewer than 50,000 residents. USDA Rural Development Funding for most of these efforts is administered by USDA Rural Business Programs. Rural Development also offers programs to provide the educational opportunities, training, technical support, and tools for rural residents to start small businesses and to access jobs in agricultural markets, the green economy, and other existing markets, as well as acquire training in vocational and entrepreneurship skills they can use in the marketplace and business sector5.

Venture debt is provided to start-ups by specialized banks or venture debt funds. Venture debt carries higher risk than traditional lending and has commensurately higher interest rates than traditional lending. Taking on debt is one way that entrepreneurs can avoid dilution of their company ownership in order to finance growth. Typically, venture debt providers are closely associated with the providers of venture capital equity and form tight working relationships across a number of invested portfolio companies. Investors support venture debt because it may allow them to extend the capital, and therefore the operational runway in order to achieve the next critical milestone.
