# Inventory

Get real-time visibility into your inventory by product, region, site, type, and ownership. Proactively manage stock and adapt to changes in demand, based on what's on-hand and in-transit to your distribution centers or warehouses. Quickly respond to global events, disruptions, and trends by collaborating across your enterprise and ecosystem, to keep your supply chain moving and minimize stock-outs.

> " *Utilizing Elementum is a game-changer for our operations and performance.* "

> Chief Executive Officer

Find. Things. Faster.

Get real-time visibility into your inventory by product, region, location, and material type, so you can adapt to global disruptions and keep your supply chain moving. Quickly respond to global events and trends with Incident Management. Collaborate across your enterprise to find your inventory and secure stock based on what's on-hand and in-transit to your distribution centers or warehouses. Elementum's low-touch integration layer easily connects your data with added contextualization from the Elementum Product Graph™.

elementum
Make. Things. Better.™

Get Ahead of Your Stock.

With Inventory, you gain real-time visibility of your inventory by product, region, material type, and location. Your inventory data can include the in-transit shipment information, making it easy for you to quickly respond to changing conditions, avoiding stock-outs and reducing overstocks.

- Minimize excess and obsolete inventory while meeting demand spikes with real-time visibility of inventory across vendors, suppliers, and partners
- Real-time view of inventory in-transit to your sites enables immediate contextualization of your inventory in motion and on-hand

Get Collaborative.

When problems arise, unlock the power of collaboration by working with colleagues and inventory partners to drive issues to resolution. With Incident Management, you can respond faster to global events by collaborating across your enterprise and ecosystem, to track down your inventory. Stay actionable based on what's on-hand and in-transit to your distribution center or warehouse.

- Enable proactive inventory disruption management via alerts for potential shipment delays and external events impacting your sites
- Set up personalized alerts on inventory and locations you care about, so you can swiftly take action and fix issues before customers are impacted

Get Personal.

Inventory easily adapts to your business by incorporating enterprise-specific product hierarchy, inventory types, and regional distribution, to give you a personalized view of your supply chain. You can set up and save inventory filters for easy access to view inventory profiles you care about.

- Quickly get straight to the inventory you care about by setting up and saving your personalized inventory filters
- Anticipate inventory issues on inbound shipment delays by enabling notifications on saved shipment filters

About Elementum:

Elementum is the SCM company behind the world's supply chain orchestration platform. In today's world, instant gratification trumps brand loyalty. To survive, brands must connect across their extended ecosystem so they can operate in real-time and deliver at the speed of customer demand. By digitally mapping the $25T product economy, Elementum's platform sheds light on the flow of goods around the world, and facilitates cross-ecosystem execution to ensure that products are available at the right time, place, quantity, and cost.
