

Transport

Proactively manage global shipment lanes across your multi-enterprise supply chain to reduce leadtime variability, cut transit times, and maximize on time delivery commitments. Real-time lane management enables users to pull time, inventory, and cash out of their operations, while simultaneously increasing customer satisfaction and driving revenue growth.

“ I am extremely proud of the steps Corning has taken over the past few years to optimize supply chain. And with Elementum’s Product Graph™, built by some of the brightest minds in the industry, we expect to have the levers to be truly agile. ”

– Cheryl Capps, Corning
VP Global Supply Chain

Ship. Things. Faster.

Elementum’s logistics capabilities give you a holistic view of your entire network. Get real-time visibility into every lane, route, and shipment – all within the context of dynamically recalculated ETAs so you can reliably deliver on your service level agreements. You are alerted to shipment progress and can collaborate with partners to resolve delays before they impact customers.

With historic trend analysis of time buffer and variability per lane, users can minimize lead times and expedite while confidently taking days out of supply chain. This increase in operational efficiency allows you to drive revenue while freeing up cash and lowering cost.

Get the Big Picture

With all of your relevant shipment information in one place, there is no need to hunt across multiple systems or enterprises. At a glance, users can see what's late, what's on time, and where things are located globally.

- Follow in-transit shipments, transit times, OTD status, and excess lane variability in real time to help ensure products get to the right place, at the right time, in the right quantity
- Plan routes with detailed visibility into logistics networks, including lanes, routes, carriers, waypoints, and ports
- Drill down on historical lane performance to cut out unnecessary buffer and take days out of your supply chain

Manage Complexity

Elementum is built to connect across your entire supply chain ecosystem and serve as a single source of truth for global shipment disruptions or delays. This network connectivity lets users monitor the interdependencies of a multi-tiered supply chain, displaying dynamically calculated ETAs and unprecedented variance in lane performance.

- Receive alerts to proactively respond in times of unexpected delays or crises such as port strikes, natural disasters, or custom clearance issues
- Manage carrier commitment to SLAs and balance out competing partner priorities
- Optimize routes over time to ensure repeatable network performance across lanes

Stay Actionable

Whether your shipments are delayed by a typhoon, late pick ups, or customs clearance, the Elementum Orchestration Platform™ automatically alerts you and creates incidents to pull in all relevant parties. Solve logistics problems by collaborating with colleagues and partners, quickly mobilizing resources for proactive and efficient resolution.

- Set up personalized filters so you can keep alerts relevant and prioritize action
- Drive timely collaboration across your carriers and suppliers via multi-enterprise incident management
- Confidently identify opportunities to reduce lead-times through smart recommendations, presented in an easy-to-use interface

About Elementum:

Elementum is the SCM company behind the world's supply chain orchestration platform. In today's world, instant gratification trumps brand loyalty. To survive, brands must connect across their extended ecosystem so they can operate in real-time and deliver at the speed of customer demand. By digitally mapping the \$25T product economy, Elementum's platform sheds light on the flow of goods around the world, and facilitates cross-ecosystem execution to ensure that products are available at the right time, place, quantity, and cost.
