

Eliminate manual processes, enhance productivity, and ensure compliance

Over 2.7 billion mobile workers still lack the tools they need to be productive, yet organizations need to drive ever-greater team efficiency and regulatory compliance. The deskless workforce needs to collaborate using eyes-up, hands-free voice interfaces, not just screens.

Orion serves this critically important workforce with Voice-Activated Business Automation. Orion helps mobile and frontline teams get more done daily and meet compliance requirements. Voice-Activated Business Automation simplifies processes and delivers insights by automating processes and helping workers access the data they need.

Break down information silos and help mobile workers access data they need

Open new lines of communication between the office and the field. Integrate mobile worker activity with conventional enterprise software, eliminating barriers between teams and accelerating the flow of information.

Leverage location data for increased safety and management insight

Location services reduce wasted time and enhance worker safety. Know who's nearby or monitor important assets, get precise location instantly in an emergency, and trigger alerts when workers enter regulated work zones.

Orion AI Workflows & Voice Bots

Orion AI Workflows are software integrations and automations that help your team do more with voice. AI Workflows are easy to use — simply speak, and Orion gets it done. AI workflows are auditable for regulatory compliance and post-incident reporting. Seamlessly add them to any Orion talk group.

Data Queries

Help frontline staff access real-time data without leaving their post. Workers query status, inventory, or guest wait times using only their voice.

Emergency Alerts

Enable your team to call for help, no matter where they are. When an emergency phrase is spoken, Orion alerts safety teams with important location data.

Standard Operating Procedures

Mitigate risk while saving staff time. Using their voice, workers initiate and complete safety checklists, which are automatically distributed.

Lone Worker Reminders

Help injured team members when they can't call for help. Orion checks in with solo staff periodically and sounds alarms when workers can't answer.

Compliance Documentation

Painlessly generate correct documentation. Workers activate the workflow by saying the name (for example, "shift report"), then answering questions asked.

Geofencing Voice Alerts

Alert workers of critical safety information when they enter a hazardous work site. Notify management when workers or vehicles enter specific work sites.
