Viaccess-Orca to Acquire Secure Player Business From Discretix

Viaccess-Orca to Strengthen its Leading Position in the Field of Multiscreen TV Services

PARIS — March 11, 2014 — Viaccess-Orca (VO), a global leader in the protection and enhancement of content services, announced today that it will acquire the Secure Player business from Discretix Technologies Ltd., a leading provider of embedded security and content protection solutions. The deal is expected to close in early Q2, 2014. Secure Player is a multiplatform media player, available for Android™ and iOS® tablets and smartphones, that incorporates digital rights management (DRM) for premium VOD and live content. Viaccess-Orca will offer Secure Player as a standalone product and as part of the company's Connected Sentinel, VO's range of content protection solutions for IP-enabled content services. Connected Sentinel is also a main component in VO's end-to-end solution for multiscreen services.

“As a leader in the field of multiscreen TV solutions, VO is constantly looking for ways to improve upon and enhance its content security solutions to better meet our customers' unique requirements,” said Francois Moreau de Saint Martin, CEO at Viaccess-Orca. “This is why we are investing in Secure Player, a leading product for content protection on mobile devices, including tablets and smartphones.”

Using VO's Connected Sentinel, service providers can distribute content securely to set-top boxes (STBs), tablets, smartphones, and PCs. Connected Sentinel provides best-in-class security for any device and increases content service providers' revenue streams by enabling them to support a variety of business models including live TV, subscriptions, on-demand streaming and download, rental, electronic sell-through (EST), and more. Leveraging adaptive streaming protocols such as MPEG-DASH, Microsoft® Smooth Streaming, and HLS (HTTP Live streaming), content service providers can deliver the optimal video quality to subscribers while taking into account varying network conditions and device types.
