

A photo without a Portrait Style Background

A photo with a Portrait Style Background

What is a Portrait Style Background?

Simply put, a portrait style background features a blur effect that makes the individual's image stand out. When a portrait style background is applied, the image immediately takes on a higher quality look. We are meticulous about the amount of blur and type of blur that we apply to our backgrounds in order to achieve a natural depth-of-field. We feel it takes a School Day Picture from "good" to "great"!
