State of the IIM Industry 2020
Are You a Digital Transformation Leader or Follower?
As the non-profit association dedicated to nurturing, growing, and supporting the information management community, AIIM is proud to provide this research at no charge to our members. In this way, the entire community can leverage the education, thought leadership and direction provided by our work. We would like these research findings to be as widely distributed as possible.

Feel free to use individual elements of this research in presentations and publications with the attribution — © AIIM 2020, www.aiim.org. Permission is not given for other aggregators to host this report on their own website.

Rather than redistribute a copy of this report to your colleagues or clients, we would prefer that you direct them to www.aiim.org/research for a download of their own.

Our ability to deliver such high-quality research is partially made possible by underwriters, without whom we would have to use a paid subscription model. For that, we hope you will join us in thanking our underwriters:

About AIIM’s Industry Watch Research

Over three years ago, AIIM introduced the concept of Intelligent Information Management, or IIM, and began researching the connections between IIM and Digital Transformation.

Our 2020 Industry Watch research program looks at the impact of the rising tide of information chaos on the effectiveness of transformation initiatives, the adoption rates of core IIM technology building blocks, and IIM best practices.

We specifically structure this research around the four core IIM capabilities that provide the framework for AIIM’s Certified Information Professional (CIP) program:

1. Creating, Capturing, and Sharing Information
2. Digitalizing Information-Intensive Processes
3. Extracting Intelligence from Information
4. Automating Governance and Compliance

This State of the Industry report takes a top level view at each of these four capabilities and how they are integrated into an overall information management strategy. Specifically, this report covers these CIP topics:

- The business case for information management
- Business requirements for information management
- System design and implementation
- Change management
- High-level understanding of linkages between CIP domains
- How organizations are incorporating AI and Machine Learning in their IIM strategies

Our editorial calendar for this year (with release dates in parentheses) is as follows:

- State of the IIM Industry (Jan 2020)
- Intelligent Capture, assisted by Artificial Intelligence (Mar 2020)
- Process Automation and RPA (June 2020)
- Automated Governance, assisted by Machine Learning (Sept 2020)
- Maximizing Your Microsoft 365 and SharePoint Investment (Nov 2020)
About the Survey

We value our objectivity and independence as a non-profit industry association. The results of the survey and the market commentary made in this report are independent of any bias from the vendor community. The data shared in this report is just a small sample of the overall data generated in preparation for each research report, and distribution of the full set of findings is limited to the underwriters.

The survey was taken using a web-based tool in early January 2020. 63% of the survey participants were NOT associated with AIIM prior to taking the survey. Non-AIIM survey participants were drawn against the following criteria:

- Director/Manager, Other decision maker
- Organization size > 10 employees

All potential survey participants were given the following description of Intelligent Information Management, and asked this qualifying question: “Are you generally familiar with these technologies?” A total of 482 individuals participated in the survey who met this initial screening criteria.

1. Creating, Capturing, and Sharing Information (i.e., Multi-Channel Capture, Document Management, Collaboration, Content Migration & Integration, Knowledge Management)
3. Extracting Intelligence from Information (i.e., Metadata, Taxonomies, Data Recognition/Extraction/Standardization, Analytics/Machine Learning/AI, Search)

Additional reading from Ripcord:
The role of Robotics in both enhancing digitizing and enabling business processes is becoming a key way in which customers are making more effective use of their data. Advances in computer vision guided robots aligned to smarter software that better understands and extracts key data in a timely manner at scale are bringing huge efficiencies and innovation in the space.
The largest industry segments represented in the survey were:

- 54% of the participants were from outside the United States and employees; 43% from organizations with > 1000 employees.
- 83% of participants were from organizations with > 100 employees.
- 54% of the participants were from outside the United States and Canada.

The largest industry segments represented in the survey were:

- Financial services (finance, banking, insurance)
- Government
- Education
- Legal and Professional Services
- Manufacturing

The State of Digital Transformation – 2020
In other words, Digital Transformation is not about incremental objectives facing every organization in the age of digital disruption. for the sake of being different, but in support of the key strategic improved productivity. Ultimately, AIIM believes Digital Transformation is more than conventional change. Digital Transformation is about doing things differently – and doing different things as well. And different not just for the sake of being different, but in support of the key strategic objectives facing every organization in the age of digital disruption. In other words, Digital Transformation is not about incremental process improvement. Digital Transformation is about using information in brand new ways.

So while “Digital Transformation” is on the radar of most senior executives, the reality of Digital Transformation lags significantly behind these good intentions. We asked survey participants to evaluate themselves against three key metrics – 1) the importance their organization places on Digital Transformation; 2) how effective they believe their transformation efforts are; and 3) relative to peer organizations, how would they assess their overall organizational effectiveness.

While the average importance placed on Digital Transformation is a high 70 (on a 100-point scale), there is significant variation in responses.

- Only 45% rate their Digital Transformation Importance as >75.
- Only 24% rate their Digital Transformation Effectiveness as >75.
- Only 28% rate their Overall Organizational Effectiveness as >75.
Of the 482 organizations surveyed, only 18% rank in the top quartile relative to both transformation metrics – 1) the importance the organization places on Digital Transformation and 2) their effectiveness at translating these good intentions into action.

Additional reading from OpenText:
OpenText™ Content Services helps organizations connect content to their digital business and transform to gain the Information Advantage. Keep up with the latest best practices, information management trends and technology advances—including the shift to cloud-native technologies, leveraging AI and automating governance—in our content services blog.

"Organizations that work at “the speed of paper” are increasingly being rendered non-competitive and irrelevant. On the one hand, organizations need to “digitize everything that moves” – as early in the process as possible. On the other hand, every effort should be made to “digitalize” processes by working digitally as much as possible: born-digital documents stay digital; their flow into and through the organization is streamlined and automated; and how they are managed and ultimately disposed of is automated as well.

(Source: AIIM CIP Study Guide)"
Why do so many organizations struggle with the journey toward digital maturity?

As the currency that fuels and funds the journey, information is an organization’s most valuable asset. This means that the focus for information management must become broader than simply reducing information-based costs and risks. While this is important, it is insufficient. Rather, organizations need to focus on how to effectively monetize their information assets, directly and indirectly, in order to move the organization forward. Information management must become a business enabler. It is encouraging that 58% of organizations realize they need to move up the information management value chain from simply mitigating risk and cost to creating value.

However, a rising tide of information chaos and confusion imperils the Digital Transformation journeys of many organizations. The volume, velocity, and variety of information that most organizations need to manage, store, and protect now exceeds their ability to even marginally keep pace.

On average, organizations expect the volume of information coming into their organizations to grow from X to 4.5X over the next two years. They expect more than 57% of this information to be unstructured (like a contract or a conversation) or semi-structured (like an invoice or a form).

The content management crisis is accelerating--on average, 57% of the information that must be managed is unstructured.

It is the convergence of these twin forces – information volume and information variety – that creates information chaos and makes true Digital Transformation so challenging.

Additional reading from Intalio:
Before going digital, the General Auditing Bureau (GAB) dealt with immense volume of paperwork. Learn how SHAMEL project allowed GAB to manage and organize the data; and exchange data and documents necessary for the audit process through the Governmental Secured Network (GSN) and the MIFON network, provided by the National Information Center (NIC).
Core Transformation Challenges Facing End User Organizations
Core Transformation Challenges Facing End User Organizations

Survey participants were asked to evaluate their organizations on a 100-point scale relative to these factors:

- Overall organizational performance compared to their peer group (average score = 62)
- Digital Transformation importance (average score = 70)
- Digital Transformation effectiveness (average score = 57)

In the analysis that follows, we identified the organizations that performed above average on all three metrics (a total of 143 organizations, or 30% of the total). In the analysis we call these organizations Transformation Leaders, and compare their performance on a number of factors to everyone else – Transformation Followers.

So what are the biggest challenges standing in the way of becoming a true digital organization?

For organizations of any level of digital maturity, matching money with strategy is always a challenge. The challenge “Lack of a true strategy for managing information assets” registers seven points lower for Leaders than it does for Followers. This difference – 35% lower in percentage terms – likely also drives differences in the “budget and resources” data point.

Lack of focus and an inability to match information strategy to business strategy create cost pressures for Follower organizations. A more efficient IIM strategy allows Leader organizations to focus on the next generation of information challenges – a focus on security, customers, analytics, and alignment.

Which of the following is your BIGGEST obstacle to your efforts to become a truly digital organization?

- Data privacy and security concerns
- Lack of budget and resources
- Lack of the right in-house skill sets and expertise
- Regulation and legislative changes
- An immature digital culture
- Lack of a true strategy for managing information assets
- Lack of executive leadership follow-through

![Chart showing the percentage of Transformation Leaders and Followers who selected each obstacle]

Transformation Leaders are focused on security, customers, analytics, and alignment

Which THREE are your organization’s biggest information management challenges?

- Transformation Leaders
- Transformation Followers

Looking specifically at how cost and effort aligns with the four core IIM capabilities, the “catch-up” gap for Followers is clear. Followers are relatively more focused on getting the basics under control (Creating, Capturing, and Sharing Information and Automating Governance and Compliance), while Leaders are focused on taking past investments and pushing into gaining greater insight from the information they’ve gathered and surfacing content capabilities within key process applications.

Creating, Capturing, and Sharing Information is the spending priority for both Leaders and Followers, but more efficient Leaders can translate this efficiency into a greater focus on insights and process enablement.

In rough terms, how is your CURRENT IIM spend allocated across these main areas?

- Transformation Leaders
- Transformation Followers

Building Your Action Plan
Building Your Action Plan
A Ten-Point Digital Transformation Competency Assessment

Leading organizations follow these steps in building the Intelligent Information Management strategy that is the foundation for Digital Transformation competency:

1. **Identify your organization’s current state.** This will help in setting baselines as part of success measurements and identify what is needed across the organization.

2. **Do a review of the organizational environment.** Identify the behaviors that need improvement, understand what support will be available to the IM team for various project phases and activities, and document what tools and processes are currently in place. Documenting this insight into the current environment will help get clarity on the scope of work and change needed to achieve the third element – the desired future state.

3. **Document the future state.** Make this a collaborative, iterative activity, defining the model with ongoing consultation of stakeholders.

To begin this task, AIIM recommends that organizations focus on ten key business problems. A key starting point is understanding current strengths and weaknesses in each area, identifying how these capabilities tie to each other, and building a vivid picture of their desired future state.

For each element in the competency assessment, we’ve provided data outlining how the specific technologies associated with each major area vary among Digital Transformation Leaders and Followers.

"Readers are encouraged to take AIIM’s on-line [Ten-Point Digital Transformation Competency Assessment](https://www.aiim.org) to find out how your organization compares with others."

**Additional reading from Konica Minolta:**
While there are challenges to face with getting a digital transformation plan started or re-started – [listen to customers relate their experience with OnBase by Hyland Software](https://www.aiim.org) – which is the solution Konica Minolta and the client determined to be the right solution to meet their needs.
**Creating, Capturing, and Sharing Information**

1. **Intelligent capture** – Do you use artificial intelligence to help automatically process and categorize incoming information in all forms as it enters the organization and automatically extract the data and information that is necessary to initiate or drive core business processes?

2. **Digital workplace** – Do you have an explicit strategy and systems to encourage collaboration, especially across virtual workforces and organizational boundaries?

**Digitalizing Information-Intensive Processes**

3. **Customer journeys** – Have you documented the major journeys that are core to customer experience and satisfaction and how these journeys cut across departmental processes?

4. **Robotic process automation** – Have you deployed tools to empower knowledge workers to identify and automate the costly and repetitive manual tasks that surround their work processes?

5. **Agile development** – Does your process management platform and strategy focus on connecting systems and capabilities through APIs rather than through custom integration?

---

**Do you have a solution? Creating, Capturing, and Sharing Information**

Right axis (line) shows gaps between Leaders and Followers

**Do you have a solution? Digitalizing Information-Intensive Processes**

Right axis (line) shows gaps between Leaders and Followers
Automating Governance and Compliance

6. Lifecycle information management – Do you have a strategy for managing and automating the management, retention, and disposition of information throughout its lifecycle?

7. Planned modernization – Do you have a written decommission and transition strategy for legacy system modernization/replacement that includes a retention, disposition, and migration plan for the information they contain?

8. Information privacy and security – Does your data privacy and security plan include all content assets and protect the personal information within these assets?

Extracting Intelligence from Information

9. Machine Learning ready – Is the information in your unstructured information archives and repositories capable of being understood and analyzed by next generation machine learning engines, or is it just “dark data”?

10. Understanding information context – Do your systems merely store information, or do they also understand its context so that humans may as well?
Final Thoughts
Final Thoughts –
Five Steps to Developing an IIM Program Strategy

1. **Articulate the business vision.** The business vision will help shape what the future state could look like after delivering the IM program. Interviews with executives or other internal stakeholders should capture their business objectives, and express an understanding of the competitive forces, market position, customer and revenue cycles, supplier ecosystems, and company success factors.

2. **Outline the critical success factors that will determine how the program can be assessed.** Organizations frequently embark on a transformation initiative without identifying a clear picture of what they hope to attain.

3. **Identify the key performance indicators (KPIs) that will be the measurements and data used to assess how well the critical success factors are met.** KPIs for an information management strategy could include reductions in storage costs, reductions in time or cost to particular business processes, increased innovation, and many others.

4. **Establish success measurements so that tangible progress can be measured on a regular basis.** Showing clear and realistic reporting and communication plans to stakeholders will improve buy-in.

5. **Outline the drivers for change.** What imperatives are compelling the business to improve its handling of content, encourage better collaboration or communication, or raise productivity levels? Sources of this information will be senior management interviews, external industry or market research, internal business or marketing plans.

Visit the [Microsoft Content Services resource center](#) to get latest whitepapers, eBooks, analyst research, customer stories, and demos related to the innovative Microsoft Content Services platform – including Office 365, SharePoint, and Microsoft Teams – and the upcoming release of Project Cortex.
On a 100-point scale, only 24% rate their Digital Transformation Effectiveness as >75.

58% of organizations realize they need to move up the information management value chain from simply mitigating risk and cost to creating value.

On average, organizations expect the volume of information coming into their organizations to grow from X to 4.5X over the next two years; 57% of this information will be unstructured.

The biggest obstacles to Digital Transformation – 1) Budget and resources (22%) and 2) Lack of a clear strategy for managing information assets (18%).

On average, organizations are wrestling with 5 different content systems and repositories.

30% of organizations have “no current use or plans” for AI and Machine Learning.

Highest adoption rates among IIM technologies:
1) Information security
2) Records management
3) Privacy and data protection
4) Document management

Lowest adoption rates among IIM technologies:
1) RPA, 2) Multi-channel capture, 3) eDiscovery, 4) Analytics, Machine Learning, AI
About AvePoint

AvePoint accelerates your digital transformation success. Over 16,000 customers and 7 million cloud users worldwide trust AvePoint to migrate, manage, and protect their cloud, on-premises, and hybrid environments.

A four-time Microsoft Partner of the Year, AvePoint is a Microsoft Global ISV Partner and has been named to the Inc. 500/5000 six times and the Deloitte Technology Fast 500™ five times. Founded in 2001, AvePoint is privately held and headquartered in Jersey City, NJ.

About Hyland

Hyland is a leading content services provider that enables thousands of organizations to deliver better experiences to the people they serve.

With more than 3,000 employees around the world, Hyland is widely known as both a great company to work for and a great company to do business with.

Find us at www.hyland.com.
About Konica Minolta

Konica Minolta Business Solutions U.S.A., Inc. is a leader in content management solutions, technology optimization, intelligent video surveillance solutions, and cloud services. Our solutions help organizations improve their speed to market, use smart technology for securing their premises, manage technology costs, and facilitate the sharing of information to increase productivity. We meet our content management clients “where they are” on their Digital Transformation journey to get them started or help them to move forward according to their own priorities as they look to securely capture information, build workflows, and successfully archive their core documents. With the goal to go paper-less, our Business Processing Outsourcing group designs plans to move your boxed, paper files into a searchable repository. And, if an organization’s content management revolves around SharePoint – our SharePoint Consulting team can direct them to the best workflows and content management solutions with SharePoint. Through a comprehensive assessment of our needs and goals, we co-create the best roadmap for our clients. Clients trust Konica Minolta to help them envision how they can achieve their goals and deliver innovative solutions to give shape to their ideas.

For more information contact us at ECMinfo@kmbs.konicaminolta.us and follow us on LinkedIn, Twitter and YouTube @konicaminoltaUS.

About Intalio

Intalio is an international software provider with 30 years of innovation in the field of Content and Process Services. By combining cutting-edge technologies with AI and Machine Learning to introduce advanced Line of Business solutions, Intalio managed to become a trusted leader in Digital Transformation across the US, Europe, and the MENA region.

About OpenText

Information is every organization’s most valuable asset. The most trusted information management solution is the only solution. OpenText Content Services builds on more than 25 years of pioneering innovation to include comprehensive capture, content management and archiving solutions, all available in the cloud, on-premises or in flexible hybrid configurations.

OpenText Content Services helps organizations connect content to their digital business and transform to gain the Information Advantage by enhancing:

**The Digital Workplace**
- Enabling the preferred productivity methods of a new generation of knowledge workers
- Providing simple, intuitive tools that drive creation, sharing and collaboration
- Delivering relevant content to users in context of daily tasks

**The Digital Business**
- Extending into lead applications such as SAP®, Salesforce®, and Microsoft® to bridge silos, and speed information flows
- Applying metadata and governance rules—automatically and consistently across diverse processes and media

**Governance and Security**
- Leveraging AI and machine learning for analytics and management
- Automating content lifecycle management from creation to archiving and disposal
- Implementing industry and government compliance protocols
- Applying industry-leading security technology

Utilized by businesses and governments around the world, OpenText Content Services platforms are continually recognized as Leaders by the most respected analyst firms.

Learn more about OpenText Content Services at opentext.com/ecm.

As you read in this report, Digital Transformation is all about using your information in brand new ways in support of key strategic business objectives.

This age of digital disruption requires new strategies and skills that extend beyond traditional ECM – a modern approach we call Intelligent Information Management.

AIIM’s Foundations of Intelligent Information Management training course will guide you through an exploration of how your role as an information professional can be empowered to accelerate business activities, enrich customer experiences, and improve operational agility.

Are you ready to transform? Click here to start!
About AIIM

Here at AIIM, we believe that information is your most important asset and we want to teach you the skills to manage it. We’ve felt this way since 1943, back when this community was founded.

Sure, the technology has come a long way since then and the variety of information we’re managing has changed a lot, but one tenet has remained constant — we’ve always focused on the intersection of people, processes, and information. We help organizations put information to work.

AIIM is a non-profit organization that provides independent research, training, and certification for information professionals.

Visit us at www.aiim.org.
