Logging on to SAP Business One by entering user name and password? well, you can forget it. Activate the single sign on to SAP Business One and log on automatically using your Microsoft Windows credentials. Save the time of logging on to SAP Business One, no need to store and remember additional user name and password, and most important – you can apply the security settings of Microsoft Windows to SAP Business One, for example long password.

To activate the single sign on open the System Landscape Directory and in the Security Settings tab select the “Enable Single Sign On” checkbox. In SAP Business One, in the “Users – Setup” window, enter the Microsoft Windows account in the respective field.

Last but not least, open the Choose Company window and select the checkbox “Log on with Current Domain User” for the relevant companies.

The screenshot shows the 'Choose Company' dialog box. It has a title bar with standard window controls. The dialog contains the following elements:

- User ID: Password:
- Log on with Current Domain User
- Current Server:
- Database:
- Companies on Current Server table:

Company Name	Database Name	Localization	Version
OEC Computers	SBODEMOUS	United States Of A	910180
OEC Computers Deuts	SBODEMODE	Germany	910180
-
- Find By: Company Name Database Name
-
-

The next time you'll log on to Microsoft Windows, all you need to do for logging on to SAP Business One, is clicking OK in the Log On window.

Available in SAP Business One, version for SAP HANA and SAP Business One.

How does SAP decide whether the Windows user has an SAP license, and how do the authorizations get applied? Do we have to create an SAP user with the same name as the domain user?
