It's happening all the time, to all of us. When creating a document or when generating a report... we just need this additional piece of information, and we know how to get it! we can click the yellow arrow, drill down to the relevant record and find all we need. Now, there is another way, easier, faster, and ... customizable!

Activate the Tooltip Preview functionality under Administration > System Initialization > Tooltip Preview, and select the relevant objects and parameters to be displayed as tooltip upon mouse hover.

The screenshot shows the SAP Sales Order interface. A tooltip for 'Business Partners' is displayed over the 'Customer Ref. No.' field, showing details for BP Code C20000, BP Name PC Welt GmbH & Co.KG, BP Type Customer, BP Currency EUR, Account Balance 7.017,12 EUR, Telephone 1 030/56590-1, E-Mail info@pcweltgmbh.sap.de, and Web Site www.pcweltgmbh.sap.de. A 'User defined field' named 'VIP' is highlighted in the tooltip. Below the tooltip, a 'Tooltip Preview - Setup' dialog is open, showing a list of objects and properties that can be enabled or disabled for the tooltip. The 'Enable Tooltip Preview' checkbox is checked. The 'Business Partners' object is selected, and its 'User defined field' property is highlighted in the list of properties.

The tooltip preview shows you only the data you need upon your selection, including user-defined fields. You remain focused in the active window without having to manage multiple forms on the screen, and can complete your tasks more efficiently!

Available since SAP Business One, 9.2 version for SAP HANA PL05 and SAP Business One 9.2 PL05.

This tip and all the other tips are available on the [Tip of the week SCN page](#). You can also visit the [Implementation Arena](#) for useful implementation tips.
