

## Newsletter Vol. 93 - Introduction

Softengine News is dedicated to keeping you up to date with the latest information regarding SAP Business One systems, Softengine solutions and Best Business Practices.

### What's New?

#### Spotlight on Softengine Partner – POSDATA Group

POSDATA is an industry leader in the design, integration and implementation of POS and data collection systems. With over 40 years' experience, POSDATA combines the most comprehensive line of hardware, software, supplies and services to create custom solutions for companies of all sizes. That is why Softengine relies on POSDATA to provide expert services to our customers.

#### Managed Services

POSDATA's comprehensive managed services offering provides flexible options for supporting, maintaining and managing your valuable computing assets.

POSDATA's technical services team can assist you in designing the right solution to meet your needs. Each of the services is part of an end-to-end solution that can be taken in whole or ala carte to work in concert with your support resources. By leveraging dependable and high quality services our customers can be assured that your Return on Investment (ROI) will be maximized.

#### Product Configuration/Staging

For one location or hundreds, POSDATA Product Configuration and Staging service saves time, expenses and delivers the devices to the end-user ready-to-use, out-of-the-box. Company specializes in custom system setups, including multi-vendor integration, custom configuration and software loading for a variety of equipment, including POS systems (i.e., HP), PCs, electronic payment technologies (i.e., ingenico), mobile terminals/computers with barcode scanners (i.e., Honeywell), and barcode printers (i.e., Zebra).

## RF Site Surveys

A RF Site Survey determines, among other things, the number of unique propagation areas, or cells, of coverage for a proposed wireless system. A Mobility Systems Engineer will provide a detailed site survey analysis, analyzing a facility's layout, topography, environment and contents. The survey determines the optimal mix and locations of controllers, access points and antennas in order to provide 100% coverage for all the devices on your wireless networks, in one or multiple facilities. The generated site survey analysis document details the required location for each base radio and provides information as to the type of cabling required and an overall picture of how the wireless system will integrate into any existing network.

## Cable Installation

Having designed, installed, and supported numerous networks nationwide; POSDATA has the proven ability and resources to complete cable installations for customers with small or complex environments. An experienced team can install data and wireless networks including wireless antennas.
