After working with SAP Business One for a few years, you may notice that the company database got bigger and at the same time, some of data become obsolete.

For example: business partners who are no longer involved in the regular course of the business activity or items which are no longer on trade.

SAP Business One enables you to increase the efficiency of your daily work by using the Master Data Cleanup wizard.

A screenshot of the 'Master Data Cleanup Wizard' software window. The window has a title bar with standard OS controls. On the left, there is a vertical navigation pane with four steps: '1 Options', '2 Master Data Types' (highlighted in blue), '3 Master Data', and '4 Progress'. The main area is titled 'Master Data Cleanup Selection' and contains the instruction 'Select master data to be cleared.' Below this, there is a text field for 'Master Data Cleanup Name' containing 'SBODEMOUS_1_20160126'. A section titled 'Master Data' contains a list of checkboxes, all of which are checked: 'Item Master Data', 'Business Partners', 'G/L Accounts', 'Project Codes', 'Distribution Rules and Cost Centers', 'Tax Codes', and 'Employees'. To the right of the 'Business Partners' checkbox is a dropdown menu with 'Remove BP' selected. To the right of the 'Employees' checkbox is a dropdown menu with 'Remove Employee' selected. At the bottom of the window, there are three buttons: 'Cancel', 'Back', and 'Next'.

The Master Data Cleanup wizard enables you to remove or deactivate G/L accounts, business partners, items, VAT groups, cost centers, distribution rules, project codes, sales tax codes and employees.

Available in SAP Business One, version for SAP HANA 8.82 and SAP Business One 8.82
