

The Arbutus Advantage

With hundreds of unique and advanced capabilities, Arbutus is fast, effective, and efficient – ideal for today’s audit work environment.

Based on 25 years of software innovation excellence, Arbutus will help you achieve the highest level of business assurance within your organization.

Already using data analysis software? Learn how Arbutus is compatible with your existing audit analysis tools. Switching is fast and easy.

Contact us today and get started with a free 45-day license of Arbutus!

“I love Smart Search because it gives me the ability to quickly and easily filter down results to the key data. I use Analyzer to do all my ad-hoc analysis when an anomaly is found. I am not familiar with any other tool that can take millions of records and distill them down the way I need it done with so few keystrokes.”

Jean-Guy Pitre, CFE, CISA
Wireless Express

The Arbutus Advantage

Arbutus is committed to providing the very best in audit-specific analytics. We do this by creating and enhancing audit analysis capabilities to meet the needs of our users. If you are currently using another audit analytics technology, here are some new or enhanced capabilities you will only find in Arbutus.

Shared Folders

Arbutus allows any objects to be shared, whether they are tables, procedures, views, or any other object types. Shared folders also allow any number of projects or users to share the same object definition. This dramatically reduces administration costs associated with deployment across groups of users.

Smart Search

Arbutus Smart Search can best be described as “Google for your data”. It allows you to easily search for any term or terms in your data, automatically creating an appropriate filter for your query. You can search the entire record, or select specific fields that are of interest. Plus, any type of field can be searched, so you can look for patterns in dates and numbers as well.

Google a field or full record using Smart Search. Search on one or multiple terms.

Last Name	Address	City

The Arbutus Advantage

Enhanced View Capabilities, Including Triggers

Arbutus Views include powerful new capabilities that allow you to get the most information from your data. These include:

- View triggers that allow you to highlight individual cells in your data
- Quick filter Near allows you to instantly identify all records that are similar to a selected item
- Thin filter optimization dramatically improves the performance when viewing data using filters that exclude most records
- Related and computed fields can now be distinctly identified in the View. The colors are customizable, and allow for easy identification of non-physical fields

Use Analyzer's over 100 functions to set up colored triggers to highlight values in your view

Use the tabs to easily toggle between multiple opened data sources

Sophisticated Duplicate Testing

Arbutus allows you to identify the widest range of duplicates. In addition to “All the Same”, Arbutus offers “Same-Same-Different”, “Same-Same-Near” and “Same-Same-Similar”.

Compare Tables

With Arbutus, you can compare any two tables for differences. With just a few clicks, you can find out what has been added, deleted, or changed. Importantly, the Compare command does not require that the data be sorted, so it can be used to compare any data files, regardless of format.

Powerful Data Export Capabilities

Arbutus offers the widest range of data export capabilities. For example, you can:

- Export directly to any database via ODBC
- Export to multiple tabs in Excel spreadsheets

Fuzzy Matching

Arbutus features a wide range of fuzzy matching capabilities utilizing the powerful Damerau-Levenshtein algorithm. This can be used within the same file or file-to-file testing in areas such as audit tests (e.g., test for similar vendor and employee addresses), data harmonization or de-duplication, cost recovery, security matches between systems, and data quality testing.

The Arbutus Advantage

Multiple Tables Open At The Same Time

Arbutus allows any number of tables to be open at the same time. Each open table is shown in a separate tab, and you just click on any tab to switch tables. You have the option of:

- Closing the currently open table when you open a new one, every time
- Leaving the currently open table open and adding another table, every time
- Selectively choosing between closing the current table or opening another table

Enhanced Procedure/Scripting Capabilities

- Colorized Procedure Editor not only highlights syntax problems, but easily allows you to understand the commands
- Procedure “step mode” allows you to execute your procedure one command at a time, inspecting or correcting the environment as you go
- Procedure “Breakpoints” allow you to enter step mode at any time during the procedure, so you can skip over the portions that are operating correctly
- “Save and Run” allows you to easily make changes, then see their effect
- The ability to “lock” procedures so they can’t be viewed or edited, which ensures your procedures are safe
- Enhanced Dialog boxes allow broad user input. Specialized controls allow file selection dialogs, as well as numeric-only and date-only fields
- Identifying matching parentheses within colorized procedure editor ensures your formulas are built correctly

Date/Time Fields

Arbutus Date/Time fields may include date, time, or both. They are supported in any format, so you can compare and manipulate Date/Times in multiple and different formats.

Read Delimited Data Directly

Any delimited file, of any size, can be read directly without data conversion, meaning no waiting when reading larger delimited files. As well, delimited table definitions can be dynamically adjusted to support new data. If your data changes, it is easy to adjust the definition.

Integrate Excel With Your Automated Tests

Use Excel to launch Arbutus procedures using LegacyLink™. Just click on a spreadsheet to initiate an automated analysis, and the results easily load into your sheet.

Fastest Results

No data analysis software produces faster results than Arbutus. It has repeatedly been proven to be significantly faster than any other audit analytics software.

Long, Meaningful Names

The names of tables, fields, procedures, and more can be up to 127 characters in length. This not only allows users to utilize meaningful names throughout their interaction with Arbutus, but also ensures maximum compatibility with other products that support long names.

Re-use Printed Report Definitions

For multiple reports with the same structure, Arbutus allows the first report definition that was created to be easily re-used and modified, minimizing the effort needed when defining similar data.

Project Converter

Switching from other audit analysis software is quick and easy. Projects from your existing audit software are automatically converted into Arbutus projects with just a few mouse clicks.

This is just the start. There are hundreds of new or enhanced capabilities in Arbutus Audit Analytics. If you are interested in learning more about the advantages of Arbutus, visit our website www.arbutussoftware.com/10-reasons-to-like-arbutus.
