

Arbutus Enterprise Edition

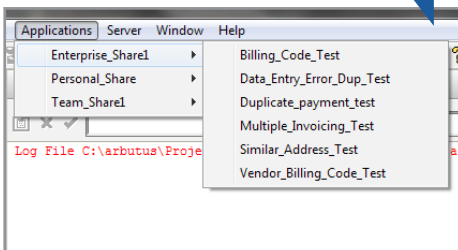

Why implement a separate solution for continuous monitoring? With Arbutus, it's a simple and seamless extension of your current desktop application.

Based on 25 years of software innovation excellence, Arbutus will help you simplify even the most complex data access and processing challenges.

Already using continuous monitoring technology? Learn how your team can do more by using Arbutus. Switching is fast and easy.

Contact us today and get started with a free 30-day license of Arbutus Enterprise Edition!

Procedures in your shared folders are automatically available from the Applications menu, giving easy administration and access to standard tests

The most effective way to simplify the deployment and management of your continuous monitoring program

Arbutus Enterprise Edition enables the seamless integration of Arbutus server technology with Arbutus Team Edition (Analyzer and LegacyLink™). It securely integrates and shares enterprise data that may be spread across disparate environments or worldwide geography. The integration is quick, easy, and powerful.

Benefits of Enterprise Edition

- Better audit coverage with improved data access
All data sources needed for your audits can be accessed and/or staged in a central repository
- Improve audit efficiency with automated and scheduled analytics
Automate analysis, schedule tests, and share results across your team
- Manage exceptions more effectively
Immediate visibility and notification for exceptions
- Greater processing performance
Enhanced performance when processing tests in an Arbutus server environment
- Stronger data security
All your audit data can be stored and analyzed in a secure server environment
- Centralize control
Administration and management of audit tests and data sources can be easily controlled
- Worldwide access
Access your data, tests, and results no matter where your team is located
- Easy deployment and use
The Enterprise Edition's interface is just an extension of the familiar Analyzer experience

WHY ARBUTUS?

The idea of a centralized audit analytics environment is not new. Contrary to what many companies have experienced, deploying a centralized audit technology does not need to be complicated, time consuming, or expensive. Why implement a separate solution for continuous monitoring when it can be a simple and seamless extension of your current desktop application?

At Arbutus, innovation is about simplifying solutions to complex challenges. With the Enterprise Edition, this improves:

- The time it takes to deploy the Enterprise Edition
- The time it takes to learn and train
- The resources required to support the centralized solution
- The cost and resources needed to implement continuous monitoring tests

The core technology of the Enterprise Edition is the Arbutus Windows Server. Arbutus also offers two additional Enterprise Servers to access and process challenging data sources:

- Arbutus zSeries Server (OS/390)
- Arbutus iSeries Server (AS/400)

Arbutus Enterprise Edition

ARBUTUS WINDOWS SERVER

Schedule and monitor your tests

Whether testing internal controls or automating audit tests, scheduling your analysis has never been easier. Any exceptions are immediately flagged for users to see, and when needed, the appropriate person emailed.

Stage data from multiple platforms

The Windows platform can be used to stage data from other platforms for performance optimization, or to increase analysis and reporting capabilities.

Staging data from multiple platforms allows for the transparent joining and comparing of data from disparate sources.

Scalable processing

Where processing demands are high, multiple Arbutus Windows Servers can be easily deployed and efficiently utilized.

Process data from any database or data warehouse

Arbutus Windows Server can process data from any database (e.g., DB2, SQL Server, Oracle).

Offload CPU cycles from production environments

When mainframe and AS/400 resource constraints make direct access solutions impractical, you can easily offload your critical processing to the Arbutus Windows Server.

Unlike typical open server implementations, our Windows Server is fully compatible with all data set structures and data types encountered on your mainframe or AS/400. This means staging data is as simple as a file transfer, with no data transformation required.

With Arbutus Windows Server, you can implement a centralized data repository, with full access for any type of query, analysis, or reporting needs, in a matter of days.

Fully integrated SAP® access via Arbutus Windows Server

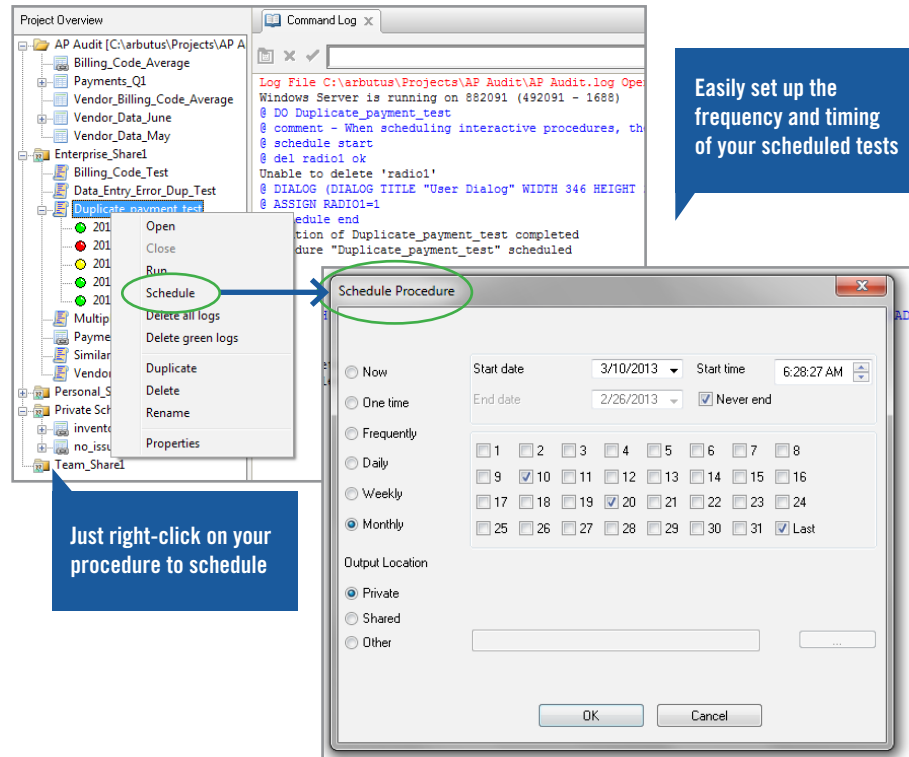

Smart Link for SAP® by Arbutus fills the functionality gap between current SAP reporting, query, and extraction tools. When used with Arbutus technology, Smart Link for SAP enables management and business analysts to efficiently deploy tests that utilize all data sources.

Arbutus Mainframe Server and Arbutus AS/400 Server

The mainframe (zSeries) and AS/400 (iSeries) platforms still represent a core, strategic component of many organizations' IT environment. They also represent a more closed system that often creates challenges for end-user data access and analysis. Offered as a powerful add-on to the Enterprise Edition, Arbutus allows auditors to access and analyze data on these challenging platforms.

“Analyzer has become an integral piece of my department. I could not do my job without it!”

*Matthew White,
Senior Systems Auditor, HMSA*

“I love the way I can build a routine so when I show up in the morning, much of the data access and preprocessing is done for me.”

*Jean-Guy Pitre, CFE, CISA
Wireless Express*

“Arbutus has outstanding customer service and technical support. Its delivery is above and beyond any other data analysis software I have used.”

*Margie Reinhart,
CEO, Reinhart Forensic Consulting LLC*

Arbutus Enterprise Edition

Direct access and analysis of all data sources

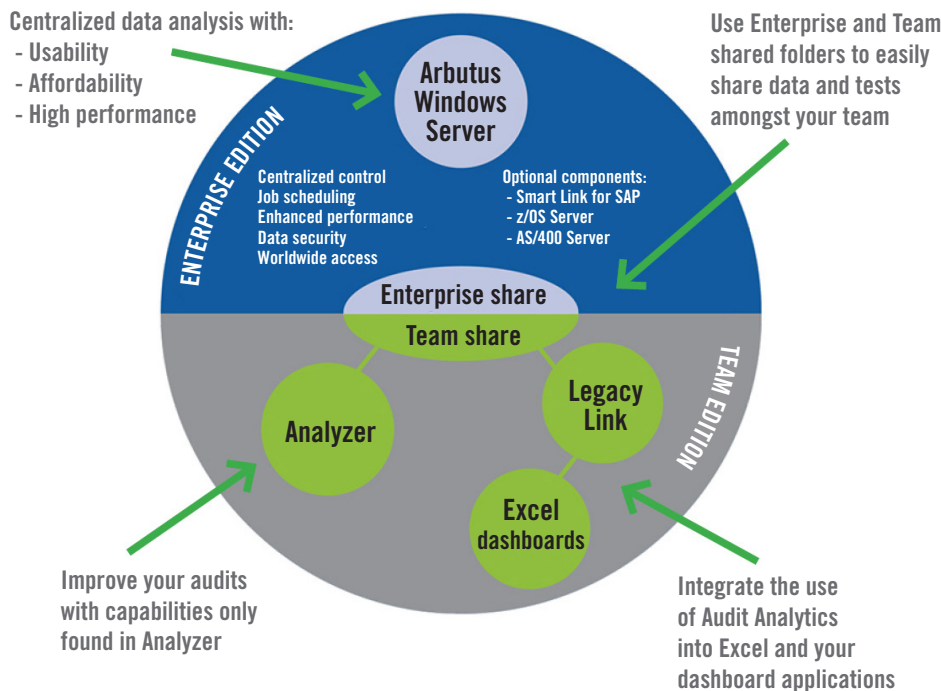

Organizations with z/OS, OS/390, MVS, or AS/400 platforms can run the Arbutus Mainframe Server and the Arbutus AS/400 Server. The Servers communicate directly with the Arbutus Windows clients, LegacyLink™, and Analyzer, to provide access to mainframe-based and AS/400-based data.

Running the Arbutus Server application natively enables direct, real-time access to, and analysis of, all data sources, including DB2, IMS, ADABAS, VSAM, ISAM, and sequential (QSAM) flat files.

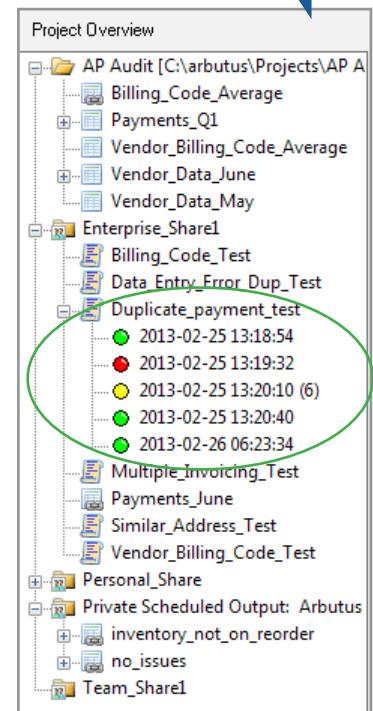

Moving data out of a closed environment

The Arbutus Mainframe Server and Arbutus AS/400 Server can also be used to efficiently move data sources to other platforms or to freely combine data with other mainframe or AS/400 data.

SOLUTION ARCHITECTURE

Colored indicators and full logs confirm and highlight results of executed test

Based on 25 years of innovation excellence, Arbutus delivers the very best in purpose-built audit analytics technology to meet the exacting demands of today's business environment. Auditors, business analysts, and fraud investigators rely on Arbutus to enhance their testing, analysis, and compliance capabilities.
