

Early Intervention and Prevention

Anonymous Text-a-Tip Technology to Help Avert Dangerous Situations

Rave Eyewitness™ enables schools to empower students to discreetly send text messages to report dangerous situations and escalate them to school staff who can respond to these situations.

- Learn about rumored weapons, incidents of bullying or mental health concerns sooner
- Solicit more need-to-know information through discreet and anonymous texts
- Access real-time reporting for logs, trends and incident patterns over time

STUDENT HEARS SOMETHING WORRISOME IN THE HALLWAY

STUDENT INCONSPICUOUSLY TEXTS WHAT SHE HEARD TO A UNIQUE KEYWORD

SCHOOL ADMINISTRATOR RECEIVES THE TEXT AND RESPONDS ASKING FOR MORE DETAILS

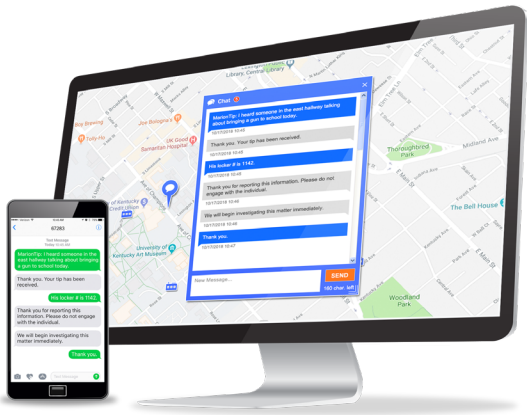

SCHOOL ADMINISTRATOR ESCALATES THE TIP AND THE APPROPRIATE RESPONSE IS COORDINATED

In **81%** of violent incidents at U.S. schools at least one person had information that the attacker was thinking about or planning the school attack and **failed to report it.**

DRIVE MORE STUDENT REPORTING

Despite being the eyes and ears of your schools, students might be hesitant to report incidents or “snitch” on their classmates.

Students, who may not feel comfortable talking directly to an adult or don’t want anyone to know they submitted the tip, can anonymously send a text message through Rave Eyewitness™. The anonymous tip technology increases engagement from students and prevents them from withholding timely, critical information that will keep your school safe from threats, such as an active shooter, bullying or drugs.

RESPOND IN REAL TIME

With the real-time web-based monitoring console, a school administrator is notified of every new text submission. The school administrator can view the tip and respond with a message to gather more information from the student.

Two-way conversations are displayed and logged in a threaded discussion and accessible from any PC, tablet or smartphone.

INCIDENT MANAGEMENT TOOLS AND REPORTING

Rave Eyewitness reports provide detailed real-time and historical reporting with key metrics and graphs, showing tips over time and audit trails.

School administrators can gain insight into tip categories and develop proactive programs. Reports also establish a record that can be useful in incident management and after-action procedures.

There is no hardware or software needed to install Rave Eyewitness, a web-based software-as-a-service product. You can begin using Rave Eyewitness™ immediately for early intervention and prevention to keep your school safe.

K-12 SCHOOL SAFETY PLATFORM

Rave Eyewitness works seamlessly with the Rave Panic Button™ app, a mobile panic button communications platform, to prevent dangerous incidents and respond faster to emergencies.

Students submit anonymous tips to prevent incidents, and staff receives these tips and then can trigger mobile panic button activations to 9-1-1 and on-site personnel if emergencies occur. This two-way communication platform empowers bystanders and speeds up the appropriate response, whether a tip or a panic button activation.

“The Rave platform has been an extraordinary resource and an integral, deeply vested part of our school safety plan.”
