

Image Attachment Size

Aspire allows you to attach images and documents to properties, opportunities and emails. When photo images are attached, Aspire allows you to specify the image size as one of four values: small, medium, large and actual. It is to your benefit to choose the smallest size image that will serve your purpose since smaller size images will display quicker on your devices.

The maximum dimensions of a file converted to a specific size are shown in the table below. The “actual” size is determined by how the original photo was taken and can vary widely.

File Size	Max Width (pixels)	Max Height (pixels)
Small	320	240
Medium	640	480
Large	1632	1224
Actual	Determined by original	

When Aspire reduces the size of an image, the image will always be reduced proportionally so that it is not stretched out. The new image will be as large as possible while still fitting into a box based on the sizes specified in the chart above.

The following image shows the relative size of images saved as small, medium and large for an image whose original dimensions were 3024 pixels wide by 4032 pixels high. The dimensions of the small image are 180 pixels wide by 240 pixels wide. Notice that to keep the height within the 320 X 240 box defined for the small size while maintaining the proper proportions of the original photo, the width must be smaller than the maximum allowed 320 pixels.

The following chart shows the dimensions and file size for each of these images to provide a guide when you are selecting image sizes.

	Small	Medium	Large	Actual
Width (Pixels)	180	360	918	3024
Height (Pixels)	240	480	1224	4032
File Size (Kilobytes)	12.9 KB	44.6 KB	247 KB	3,660 KB
