Managed Cloud Firewall

Protect your business
with a fully resilient, powerful,
managed frewall

Wavenet's Cloud firewall allows your business to maintain control of its own security whilst leaving asset management, maintenance and firmware updates to us. Our managed Cloud Firewall is built to be integrated with our connectivity so you can protect your business, reduce costs and future-proof your business's security.

Our Cloud Firewall solution enables complete and secure use of your network by blocking access to inappropriate content across the Internet, preventing unapproved access into your business's network and stopping downloads of infected files or applications.

By utilising Wavenet's Cloud firewall you can maintain control of your own security whilst leaving asset management, maintenance and firmware updates to us so you can concentrate on your business.

With our cloud firewall you no longer have to worry about the cost of deployment and management of firewalls for multiple business locations to ensure that your business is always protected.

Features

- Network Level Filtering
- Stateful and Deep Packet Inspection
- DMZ Support
- IP Rules Set-up
- User Identity Management
- Change Control & Logging

Benefits

- Fully Redundant Architecture
- Based on Cisco Security Appliances
- Managed 24/7
- Future-proof Technology
- Granular Control
- No on-site firewall to manage or maintain
- Quick to implement changes
