

## About Our 24/7 Anti-Virus and Device Security Service

### Why F-Secure for AntiVirus and Device Protection?

Our network operations center and security technology partners are the professionals at F-Secure, of Helsinki, Finland.

For 26 years F-Secure has been a leading innovator on the forefront of antivirus systems and computer device security.

F-Secure was the first to discover a virus on the Internet, 28 years ago, and has since played a leading role in the global race to fight cybercrime.

We uniquely make available F-Secure enterprise-class products, and they are not available on the App or Play Stores.

*For Windows, Macs, and Androids.  
iOS not available at this time.*

# How Does F-Secure Protect Your Computers, and Android Smartphones and Devices?

*Each device is monitored and managed independently by the F-Secure network operations center with real-time intelligence and defenses, quickly and automatically.*

***F-Secure DeepGuard 2.0*** - A cloud-based technology that protects all subscribers within 60 seconds from the first confirmation of a new threat on the Internet.

***F-Secure Blacklight*** - This technology prevents concealed rootkits from attacking your computer or smartphone.

***F-Secure Anti-Virus*** - F-Secure research labs publish and updates virus definitions more frequently than any other antivirus software vendor in the market. Our customers are automatically updated within 60 seconds of a new virus or spyware confirmation.

***Internet Shield*** - Internet Shield protects the computer against external intruders, unauthorized attempts at connecting to your computer or phone, insider attacks and information theft.

***Firewall*** - Firewall protection is "on" even when the computer is not connected to the Internet. The firewall software is automatically updated the next time an Internet connection is made.

***\*\*F-Secure Software Updater*** - Scans and reports missing updates for 3rd party software and deploys security updates automatically. This includes Microsoft updates, Adobe Flash, Java, OpenOffice, archive managers, media players, and image viewers, all which are prone to vulnerabilities.

***\*\* 83% of malware attacks could be avoided with up-to-date software. \*\****

## About Total Digital Security

- Incorporated in Florida, March 2013.
- Founded and led by Bradford A. Deflin, a 30-year veteran of risk-management across a multiple of disciplines including aviation and financial services.
- The firm's mission is to provide the best solutions available today in order to build digital security eco-systems designed for long-term sustainability, resiliency, adaptability, compatibility, and portability, with no vendor-imposed restrictions.
- Open-source software is favored in all elements of design.
- Geography is an important component to digital security and durability. Our network operations center is in Finland and our email and data centers are in Switzerland. Besides the favorable legal environment, we find exceptional engineers, hardware design and build, and an enthusiastic passion for performance and service. We are not limited to these geographies.
- Our 24x7 Continuous Online Security Monitoring network ops center, in Helsinki, monitors all Internet activity and prepares defenses in real-time. These defenses are installed to our customer's devices within 60 seconds of development. Additionally, some of these defenses are based on algorithmic predictions of virus mutation and location.
- We operate as a service company, as opposed to a product company. We position ourselves as the customer's advocate in the process of maintaining ultimate vigilance and surveillance during an environment of rapid and accelerating change.
- We have no access to your information or data. Everything we do is at a high, system and machine level that monitors and manages all aspects of digital security.

In short, we are passionate about technology and keeping our clients and their significant ones safe and secure online. It is our job to act as your Chief Technology Officer, your IT department, and a trusted advisor in your over-all risk-management plan. We keep our clients protected and informed, constantly monitoring the industry, assessing the risks on the horizon, and evaluating the products and solutions as they are innovated and become available.
